ICUBE DEVELOPMENT (CALGARY) LTD.

Timeclock Manager Guide

Daily checks, employees and cards, attendance corrections, late and early flags, vacation, pay-period review and payroll reports.

START HERE

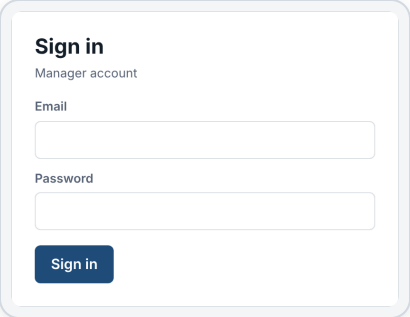

How the manager site works

You manage the timeclock from a web browser on the company network. Some changes also need your manager card, tapped on a clock.

Signing in

1. Open the clock's web address in your browser, for example *https://timeclock.example.com/login*.
2. Enter your work email and password, then select **Sign in**.
3. You stay signed in for up to 8 hours. Select **Sign out** (top right) when you finish on a shared computer.

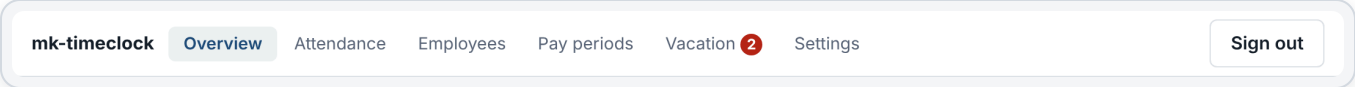

Forgot your password? Another manager can reset it under **Settings > Manager accounts**. You can change your own password on the same page.

Manager sign-in

The menu and red numbers

The menu has six items: **Overview**, **Attendance**, **Employees**, **Pay periods**, **Vacation** and **Settings**. A red number counts things a person needs to look at, such as a vacation request waiting for a decision. Counts for setup and device pages are added to **Settings**.

The menu, with 2 vacation requests waiting

The pages use the same colours:

Problem · Missing OUT · New export required	Something is wrong or out of date. Fix it before payroll.
Check · Waiting · Late 11 min · Review pending	Needs your review or decision, but nothing is broken.
Done · Approved · Reviewed · Online	Finished or working normally.
Closed · Not required	Information only.

Settings

Everything that isn't daily work is on the **Settings** page, in four groups: **Company** (pay schedule, bulk schedules, report delivery, stat holidays, employee emails and links, manager accounts and cards), **Email** (templates, outgoing email, email queue), **Clock** (grace, display, time sync, HTTPS, health, backups, clock management, system operations) and **Audit** (unknown cards, rejected uploads, raw swipe export, diagnostics, audit log). This guide writes these as, for example, **Settings > Email queue**.

Your manager card

Your manager card is a separate card from any attendance card. It never records attendance. Its job is to prove that a manager is physically at a clock before the system makes a protected change.

Approving a change

Manager card tapped at other times. Nothing is recorded.

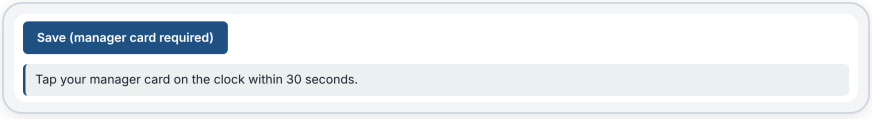

When a card tap is needed

- Ticking or unticking **Manager** or **Active** on an employee
- Deactivating or reactivating a card
- Creating, resetting, locking or unlocking a manager sign-in
- Saving **Report delivery** settings
- Restoring a default email template
- Changing the time zone
- Downloading or restoring a backup, and every **System operations** action

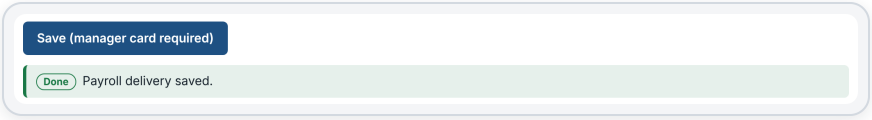

Replacing a lost card, editing schedules, corrections, reviews and vacation decisions don't need a tap.

How it works

1. Select the button on the web page. Buttons that need a card usually say **(manager card required)**.
2. The page shows **Tap your manager card on the clock within 30 seconds.**
3. Tap your manager card on a clock. It shows **APPROVED / ACTION AUTHORIZED**.
4. The page confirms the change, for example Done **Payroll delivery saved.** If 30 seconds pass first, it says **Time ran out. Try again.**

Waiting for the tap

Saved after the tap

Registering a manager card

Under **Settings > Manager cards**, select **Scan a card (30 seconds)**, tap the new card on a clock, then select **Register this card**. The card is registered to your own account. Keep manager cards secure: anyone holding one can approve protected changes. The clock won't let you remove the last active manager card.

> **Never use your manager card to punch in**
>
> Use a separate attendance card for your own hours. A manager card tap never counts as attendance, and a manager card can't be added to an employee as an attendance card.

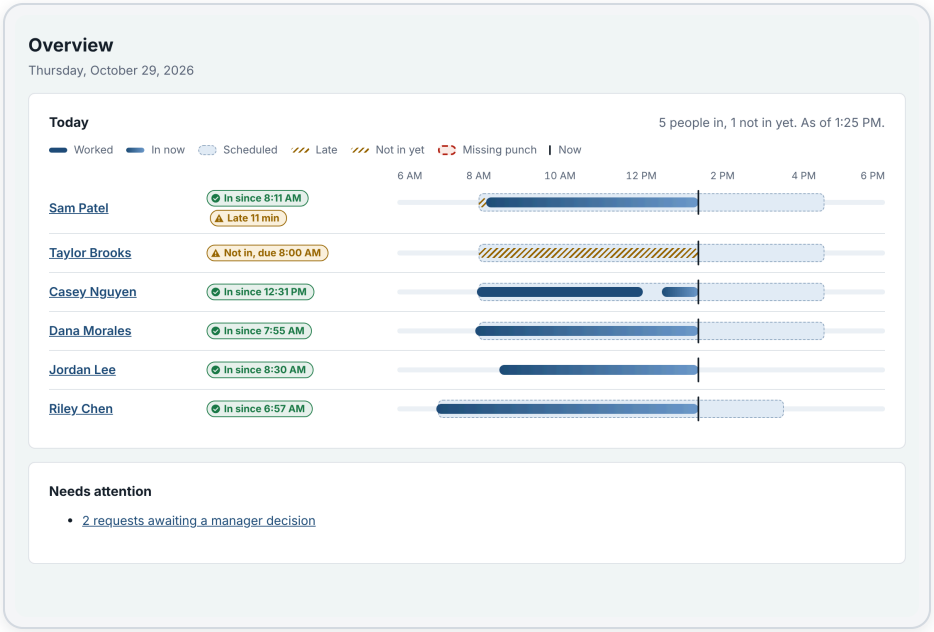

CHAPTER 1

Daily checks

A quick look each morning catches most problems while they are still easy to fix.

Overview

Today shows one row per active **Punch required** employee, with a bar across the day. The dashed slot is the schedule; the solid bar is recorded time. Flags beside each name say In since 8:11 AM, Late 11 min or Not in, due 8:00 AM. Select a name to open that person's attendance. Vacation-only staff are not listed.

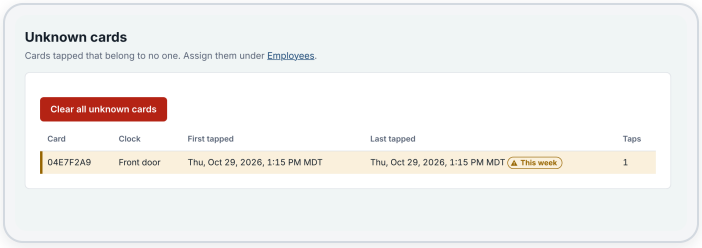

Overview: Sam tapped in 11 minutes late and Taylor, a new hire, hasn't tapped in yet

Needs attention

Lists every open issue as a link, for example ended periods not yet closed, vacation requests waiting, employee records missing a schedule or email, failed emails, clocks not reporting, refused swipes, an old backup or a certificate about to expire.

Settings > Unknown cards

Cards that were tapped but don't belong to anyone, usually a new hire's card. Add the card to the employee (Chapter 2), then select **Clear all unknown cards**.

An unknown card tapped at the front door

> **Daily checklist**
> Open the Overview. Read **Needs attention** and look for red numbers in the menu. Check that everyone expected is in. If a clock is not reporting, its taps are being saved on that clock and will arrive when it reconnects.

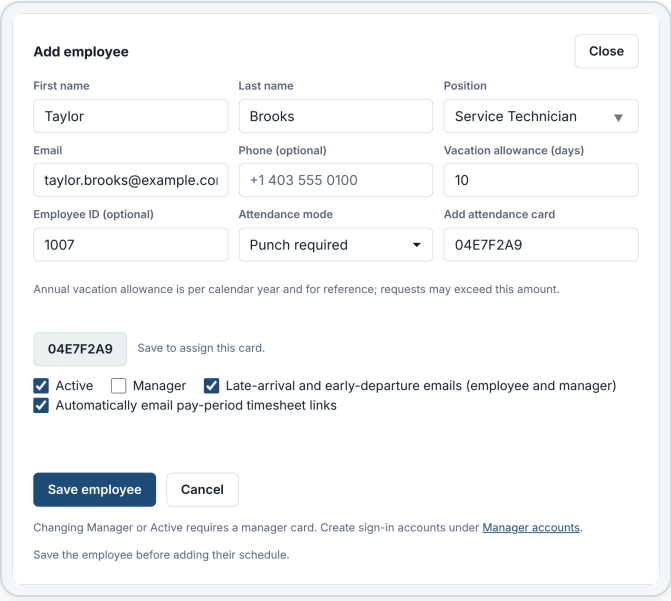

CHAPTER 2

Employees and cards

Each employee has one record that holds their details, cards, schedule and email choices.

Adding an employee

1. Go to **Employees** and select **Add employee**.
2. Enter first name, last name, position and email. The email is used for welcome, timesheet, late-arrival, early-departure and vacation messages.
3. Optional: enter your company's **Employee ID**. Leading zeros and letters are kept. It appears on payroll reports, emails and vacation lists. If you leave it blank, the clock's own number is used. Two people can't share an ID.
4. Optional: enter a **Vacation allowance (days)** in whole or half days. Blank means unspecified and zero means zero. It's for reference only and doesn't limit requests.
5. Choose the **Attendance mode**. **Punch required** is normal. **Vacation only** is for staff who track vacation but don't tap in.
6. Select **Scan card (30 seconds)** and tap the new card on any clock. The card number appears on the button. You can also type a number from Unknown cards into **Add attendance card**.
7. Select **Save employee**, then add the schedule in the same record (next pages).

Adding Taylor Brooks with a scanned card

The new employee gets a welcome email with their private vacation link. The list flags ⚠ No schedule until you set one.

The checkboxes control late-arrival and early-departure emails, and automatic timesheet links, for this person.

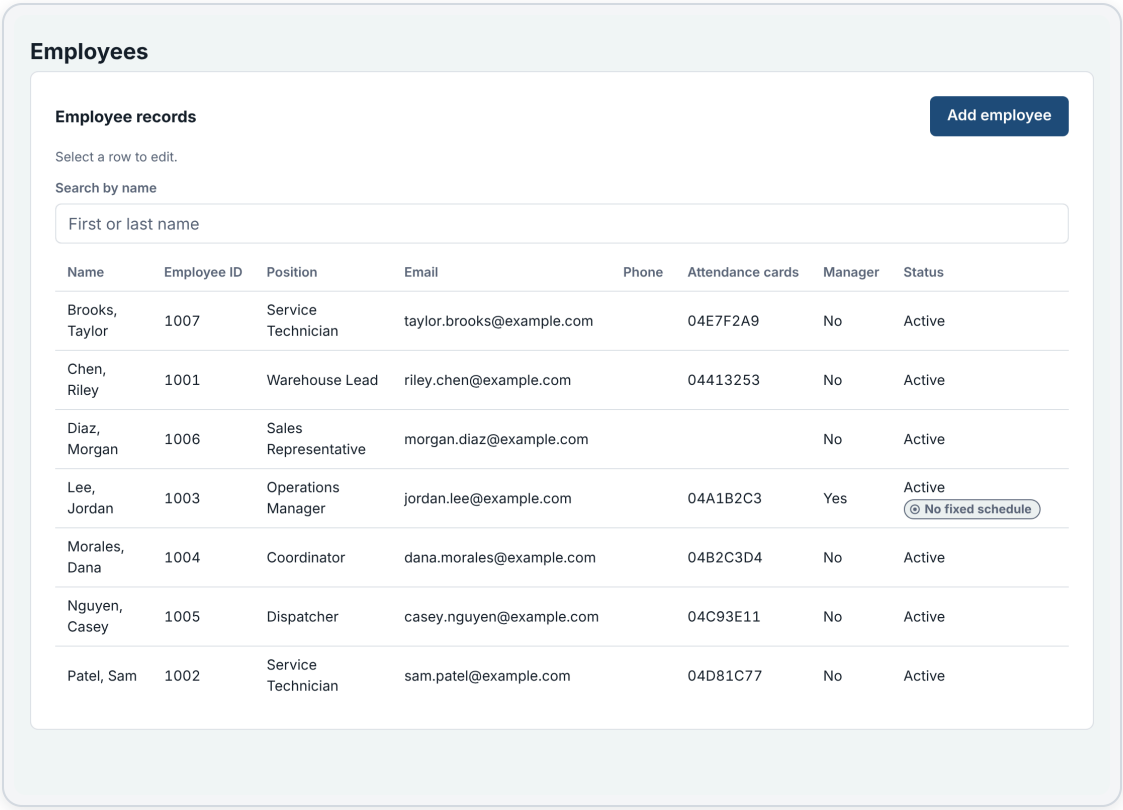

Ticking **Manager** or changing **Active** needs a manager card tap. A manager also needs a sign-in, created under **Settings > Manager accounts**.

Resend welcome email and **Send vacation link** are in the same record.

Finding people and replacing cards

Finding someone

Type in **Search by name** above the list. It matches first or last names and includes inactive employees. Select a row to open that person's record. Flags in the **Status** column show what's missing, such as ⚠ No schedule or ⚠ No email.

Employees

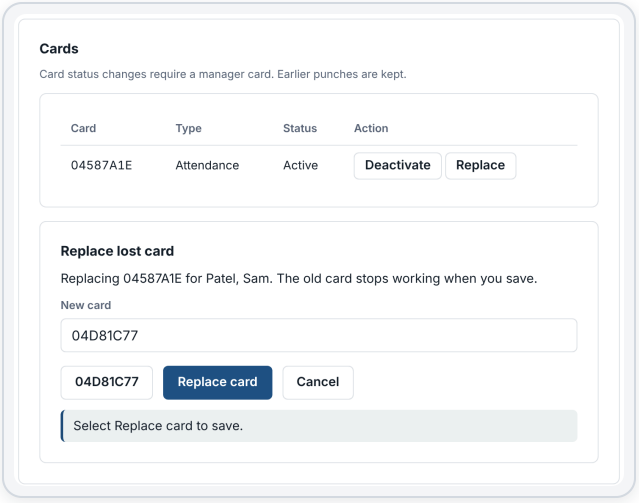

Lost or damaged cards

Open the employee and find **Cards**.

1. Select **Replace** next to the old card.
2. Select **Scan new card (30 seconds)** and tap the new card on a clock.
3. Select **Replace card** and confirm.

The page says **Card replaced. The old card no longer works.** Past punches are kept and the change is in the audit log. No manager card tap is needed.

Deactivate stops a card without giving a new one, for example when someone leaves. **Reactivate** brings a card back. Both need a manager card tap.

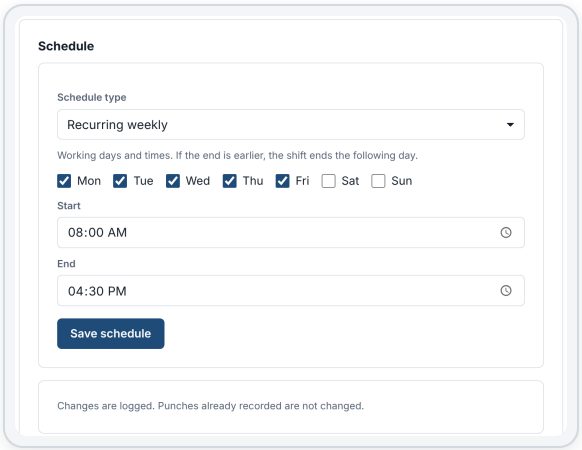

Replacing Sam Patel's card

Schedules and grace

A schedule tells the clock when each person is expected. It's used for late-arrival, early-departure and missing-punch notices, the Overview and the timesheet link timing. It doesn't change recorded hours or pay.

1. Open the employee and find **Schedule**.
2. Choose a **Schedule type**:
   - **Recurring weekly**: tick the working days and set start and end times.
   - **Dated shifts**: enter specific shifts by date, for rotating schedules.
   - **No fixed schedule**: the person is never marked late or early and gets no missing-punch notices.
3. Select **Save schedule**.

Monday to Friday, 8:00 AM to 4:30 PM

If the end time is earlier than the start, the shift ends the next day (overnight). Changes are logged, and punches already recorded aren't changed.

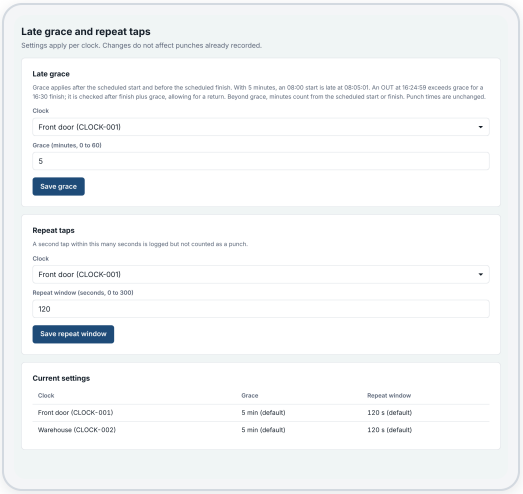

To go through several people in a row, use **Settings > Bulk schedules**. It's the same editor with an employee list.

Late grace and repeat taps

Under **Settings > Late grace and repeat taps**, each clock has two settings:

- **Grace** (default 5 minutes, 0 to 60). It applies after the scheduled start and before the scheduled finish. With 5 minutes, an 8:00 start is late at 8:05:01, and a 4:30 PM finish is early at 4:24:59. Beyond grace, minutes count from the scheduled start or finish.
- **Repeat window** (default 120 seconds, 0 to 300). A second tap inside this window is logged but doesn't count as a punch. The employee sees ALREADY RECORDED.

Changing the grace doesn't change punches already recorded.

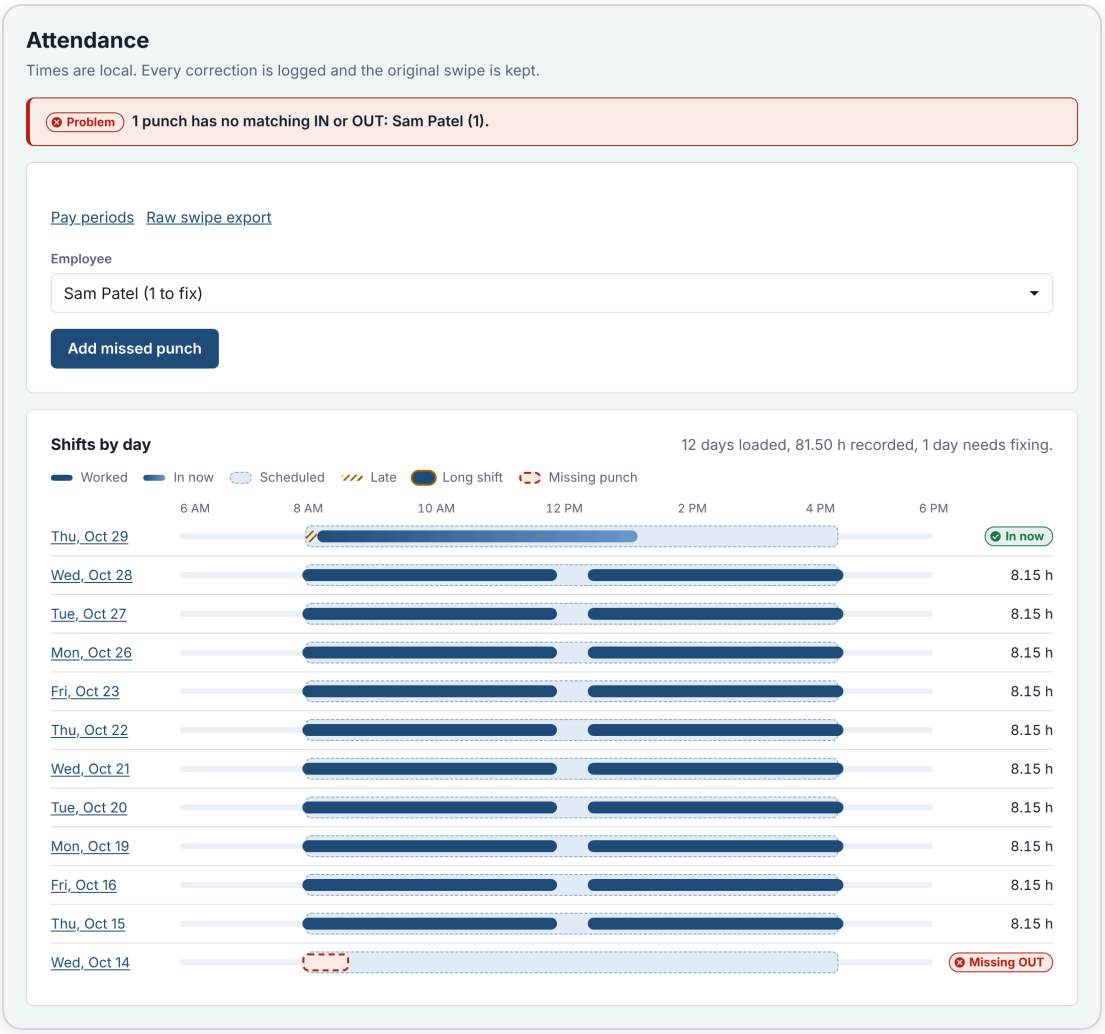

Grace and repeat window for each clock

CHAPTER 3

Fixing punches

When someone forgets to tap, taps at the wrong time or tells you about a problem, fix it on **Attendance**. The original swipe is always kept, and every correction is logged.

Sam Patel has an IN on Oct 14 with no OUT. The employee list says "1 to fix"

Find the problem

The red banner names everyone with an unmatched punch, and the **Employee** list shows how many each person has to fix. **Shifts by day** draws each day; a red dashed box and Missing OUT mark the day to fix. In the **Punches** table, rows flagged No OUT or No IN are the ones to fix.

Attendance shows recent punches. The line above the chart says how many days are loaded. Older periods are in the reports under Pay periods.

Ways to correct

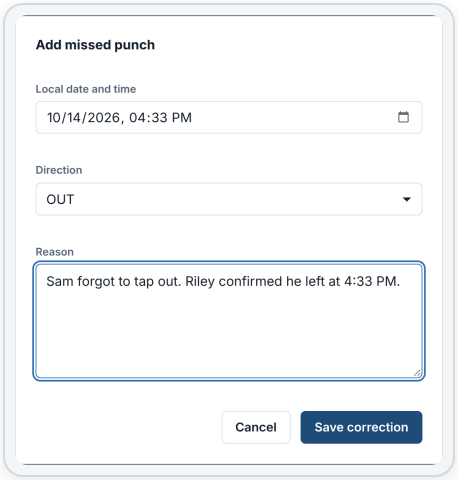

- **Add missed punch**: adds an IN or OUT the person forgot.
- **Change**: moves a punch to the correct time or direction.
- **Void**: removes a punch from the hours, such as an accidental tap.
- **Manager note**: on a late or early punch, records why it was approved (later in this chapter).

Every correction needs a reason of at least 5 characters and asks you to confirm.

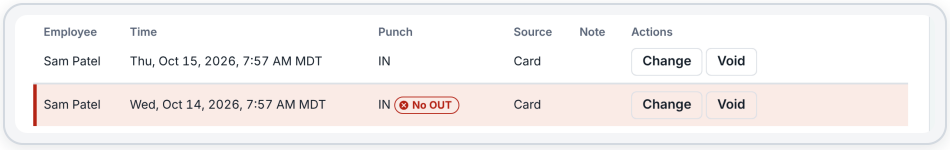

Adding a missed punch

1. Choose the employee and select **Add missed punch**.
2. Enter the local date and time, and the direction (IN or OUT).
3. Enter a reason, for example who confirmed the time.
4. Select **Save correction** and confirm.

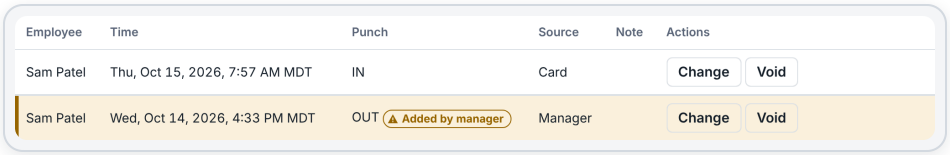

The added punch shows ⚠ Added by manager and the source **Manager**, and the employee is emailed that their recorded hours were corrected. The employee sees your reason on their timesheet, so keep it factual.

Sam's missing OUT

Before: the Oct 14 IN has no OUT

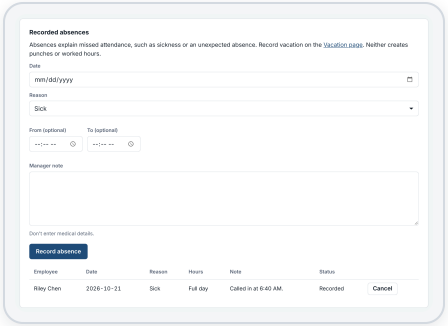

After saving: the Oct 14 shift is complete

> **Corrections after a period closes**
>
> Closed periods can still be corrected. The employee's review then shows ⚠ Changed since review and the period shows ⊗ New export required. Review the employee again and create a new export revision (Chapter 5).

Recorded absences

At the bottom of Attendance, **Recorded absences** explains a missed day (sick, medical appointment, personal day, family emergency, bereavement, unpaid leave, unexcused, other) without creating punches or paid hours. Leave **From** and **To** empty for a full day. Absences appear on the employee's timesheet. An excused absence also stops late and early flags for the time it covers.

Record vacation on the Vacation page instead (Chapter 4). **Don't enter medical details** in the note.

Riley's sick day

Late and early

The clock flags late arrivals and early departures against each person's schedule and the clock's grace (Chapter 2). Flags never change punch times or hours.

Employee	Time	Punch	Source	Note	Actions
Dana Morales	Wed, Oct 28, 2026, 3:52 PM MDT	OUT ⚠ Left early 38 min	Card	Approved. Dana arranged this with me in advance.	Manager note Change Void
Dana Morales	Wed, Oct 28, 2026, 7:56 AM MDT	IN	Card		Change Void
Dana Morales	Mon, Oct 26, 2026, 4:33 PM MDT	OUT	Card		Change Void
Dana Morales	Mon, Oct 26, 2026, 8:14 AM MDT	IN ⚠ Late 14 min	Card	Bus was 15 minutes late on Macleod Trail.	Manager note Change Void

Dana's late arrival on Oct 26 with her reason, and her early departure on Oct 28 with a manager note

Late arrival

Only the first tap in for a shift can be late. Returning from lunch is never late. The clock shows LATE, and the employee and every active manager are emailed straight away.

Early departure

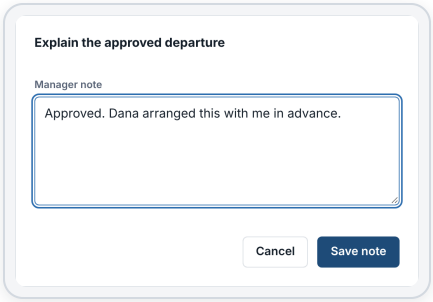

Checked shortly after the scheduled finish plus grace. If the employee tapped back in before then, the earlier tap out was a break and isn't flagged. A real early departure gets ⚠ Left early 38 min and the same two emails. For an overnight shift, the finish is the next morning.

Missing punches

If no IN arrives after the scheduled start plus grace, or no OUT after the finish plus grace, the employee is emailed a **No IN** or **No OUT** notice.

Reasons and manager notes

The employee's email has a private link where they can give a reason; it appears in the **Note** column. To record your own explanation, select **Manager note** on the flagged punch, enter the note and select **Save note**. The Note column then shows your note. Every version is kept under **Note revisions** in the audit log, and the note appears in the payroll report.

Corrections and flags

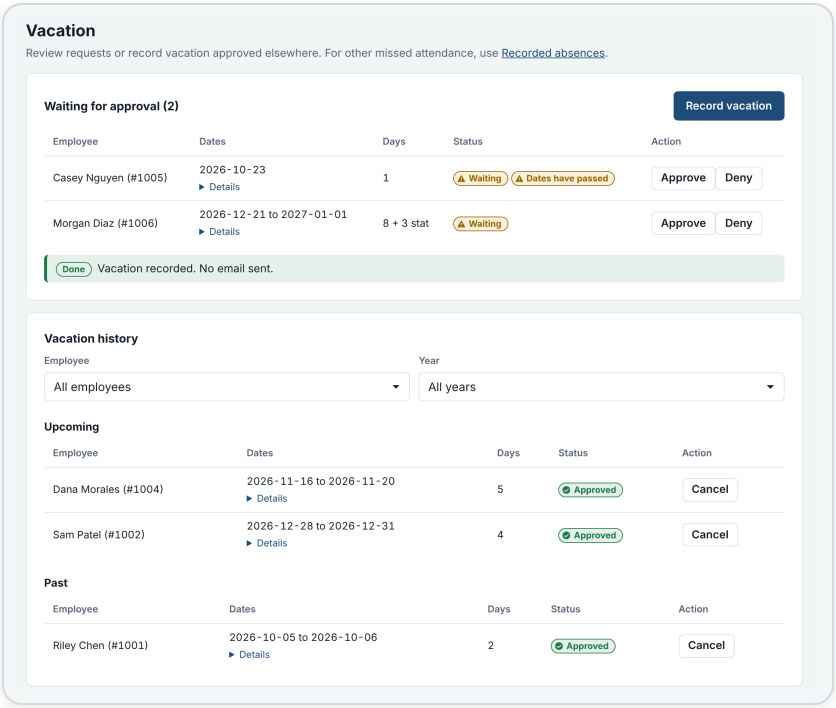

Changing or adding an IN recalculates its lateness. Changing or adding an OUT recalculates the early departure, after the shift's finish if you correct it during the day. Corrections don't send new late or early emails. No flags on approved full-day vacation, excused absences, or days without a schedule. Untick the employee's late-arrival and early-departure emails to keep the flags but stop the emails.

CHAPTER 4

Vacation

Employees request vacation from their own private page. Requests appear on **Vacation** under **Waiting for approval**, and you also get an email.

1. Read the dates and number of days. Open **Details** for the return date, the employee's notes and any stat holidays inside the request.
2. Select **Approve** or **Deny**. A box asks for a manager note (optional). The employee sees the note in their email.
3. The page shows Done **Decision saved.**, the request moves to Vacation history, and the employee is emailed.

Two requests waiting, Dana's November vacation approved, and Riley's vacation recorded

Dates have passed marks a request still waiting after its last day. Nothing expires on its own; approve or deny it.

Days show stat holidays separately, for example **8 + 3 stat**. Stat holidays aren't counted as vacation.

Cancel withdraws an approval you already gave. The employee is emailed and told to contact you about their schedule.

Vacation history is split into **Upcoming** and **Past**, with Employee and Year filters. Long lists have Previous and Next pages.

Annual vacation report: choose a year and select **Download Excel-compatible CSV**. It starts with one summary row per employee (allowance, approved days, remaining days), then each booking with a running balance. Future approved bookings count; pending and denied requests don't.

Approved vacation appears on the timesheet and in the payroll report. It doesn't add hours. Allowances are for reference; there's no accrual and no limit.

Recording vacation

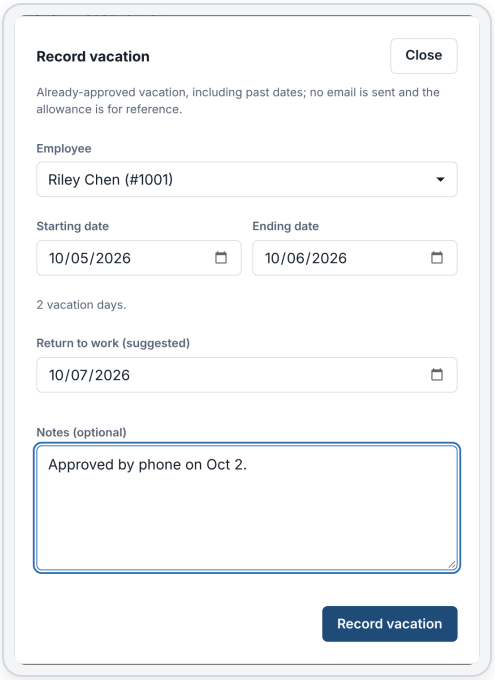

When vacation was approved by phone or email, or before the clock was installed, record it yourself.

1. Select **Record vacation**.
2. Choose the employee and the starting and ending dates. Inactive employees can be chosen for past dates. For one day, the ending date fills in for you.
3. Check the calculated days, for example **2 vacation days**, and the suggested return date. Leave the return date blank to use the suggestion.
4. Add a note if you want, then select **Record vacation**.

It's saved as Approved and audited under your name. The page says **Vacation recorded. No email sent.**

> **Vacation only**
> The Vacation page is for vacation. Record sick days and other missed attendance under **Recorded absences** (Chapter 3).

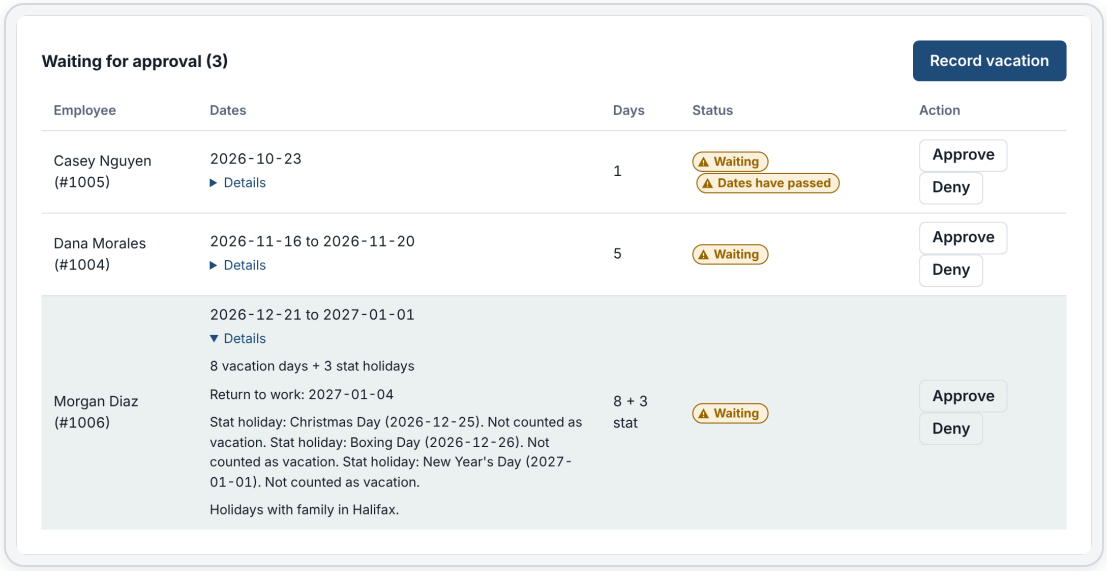

Vacation recorded or cancelled inside a closed period marks that period ⊗ New export required (Chapter 5).

Recording Riley's vacation, approved by phone

Stat holidays in a request

The **Details** of a request name each stat holiday inside it, even one that falls on a weekend. Changing a holiday or a schedule later updates the current count. The originally requested count is kept, and Details explains any difference.

Details open on Morgan's request: 8 vacation days + 3 stat holidays

CHAPTER 5

Pay periods

Each pay period closes on its own when it ends. Your job is to fix problems, review each employee, and save the report that goes to payroll.

STEP	WHERE	WHAT HAPPENS
1. The period closes	Automatic	The day after it ends, the period closes as an attendance snapshot. Closing doesn't mark anyone reviewed.
2. Timesheet links go out	Automatic	Each employee is emailed a private, read-only link to their timesheet (Chapter 7), and payroll gets a summary.
3. Fix problems	Attendance	Add missing punches and fix anything employees tell you about.
4. Review	Pay periods > Review	Select **Mark reviewed** for each employee once their hours are right.
5. Save the report	Pay periods	Select **Create export / revision**. The revision is saved and never changes.
6. Report to payroll	Automatic, or Send report	The payroll report is emailed before payday at the set time (Chapter 6).

> **Review before the report goes out**
> The automatic payroll report is sent for every closed period at its scheduled time, whether or not you've finished. It lists unresolved punch problems and pending reviews as exceptions. Finish steps 3 to 5 before the send time, or turn automatic sending off and use **Send report** yourself.

Employees don't approve their timesheets

Timesheet links are read only. They say **Contact your manager if there is an issue.** There's no employee approval, and no manager override. Only managers correct and review attendance.

Pay schedule

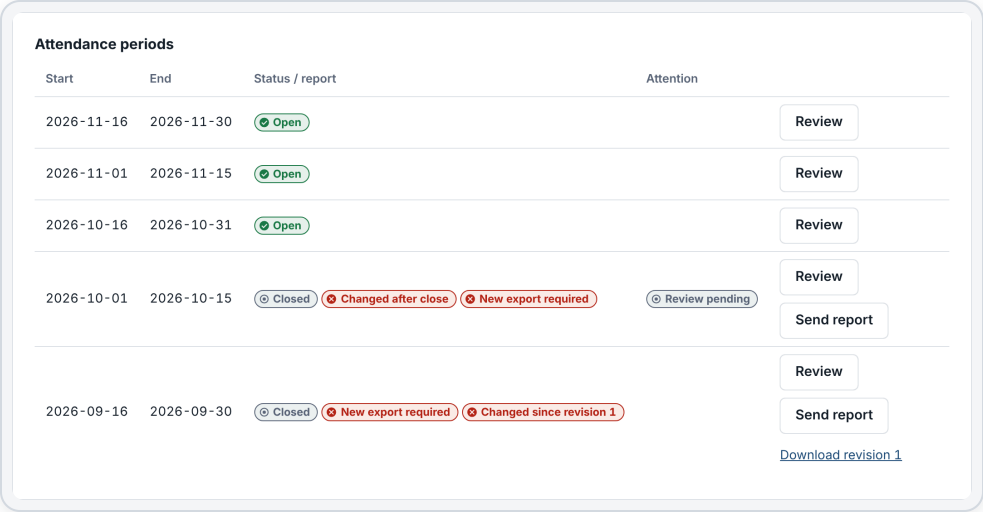

Periods are created automatically. Set the frequency (twice monthly, every two weeks, weekly or monthly) under **Pay periods > Attendance period schedule**, then **Save pay schedule**. Closed and reviewed periods are kept. A shift that crosses midnight counts in the pay period of its IN date.

Closing early

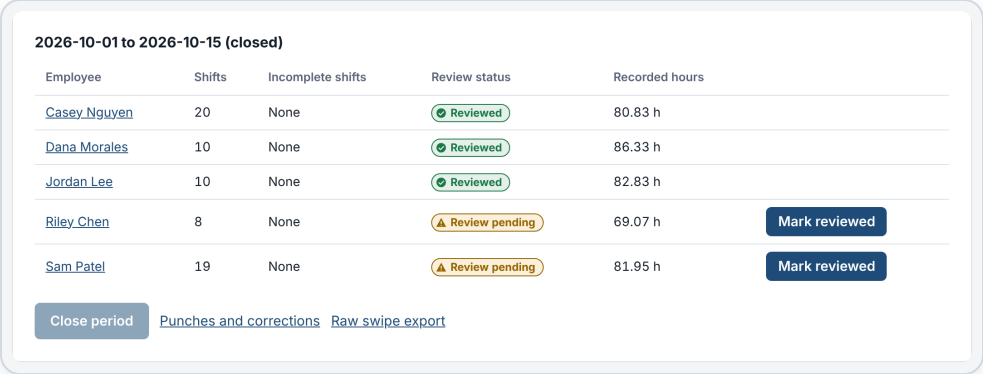

To close an open period before it ends, select **Review** on it, then **Close period**. Any problems are listed as ⚠ Exceptions to report; closing doesn't mark them reviewed.

Reviewing a period

Go to **Pay periods**. A closed period that still needs work shows red flags, and the **Attention** column says Review pending. Select **Review** on that row.

October 1 to 15 has closed automatically. Nobody has been reviewed and no report is saved yet

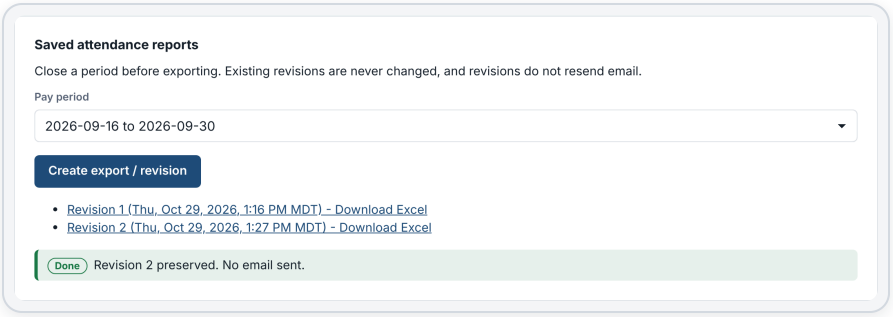

Three employees reviewed, two to go

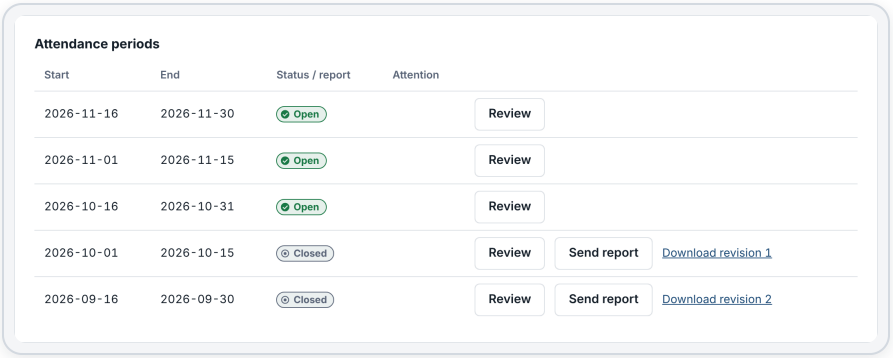

COLUMN SHOWS	MEANING	WHAT TO DO
Fix punches	Incomplete shifts: a punch has no match.	Select the name to open Attendance and fix it (Chapter 3).
Long shift	A recorded shift over 20 hours.	Check the punches. It's often a forgotten OUT.
Review pending	Not reviewed yet.	Check the hours, then **Mark reviewed** and confirm.
Reviewed	Reviewed, and nothing changed since.	Nothing.
Changed since review	Punches or leave changed after review.	Check again and **Mark reviewed**.
Not required	Vacation-only employee with no punches in the period.	Nothing. If they tapped the clock, review is required as usual.

Saving the report

1. Under **Saved attendance reports**, choose the pay period.
2. Select **Create export / revision**. The page says, for example, **Revision 1 preserved. No email sent.**
3. The period's row now has **Download revision 1** if you need a copy.

September 16 to 30 changed after its first report, so revision 2 was saved

Both closed periods reviewed and saved, each with its latest revision

STATUS / REPORT SHOWS	MEANING
Open	The period hasn't ended.
Closing pending	The period ended with attendance but hasn't closed yet. It closes on the next check.
Closed **with no other flag**	Reviewed, and the latest revision matches the records.
Changed after close	A review is pending, or something changed after an employee was reviewed. Review again.
New export required	There's no saved revision, or the records no longer match it. Create the next revision.
Changed since revision 1	The records changed after that revision was saved, for example a late upload, a correction, or vacation approved later in the year.
Report not queued	The payroll email couldn't be prepared. The reason is shown beside it.

The Excel workbook has two tabs. **Payroll Summary** shows hours, leave, exceptions and annual vacation used for each employee. **Daily Detail** has one row per punch or record, with any reason or manager note. Saved revisions never change.

The timeclock reports recorded attendance. It doesn't deduct breaks or calculate pay or overtime.

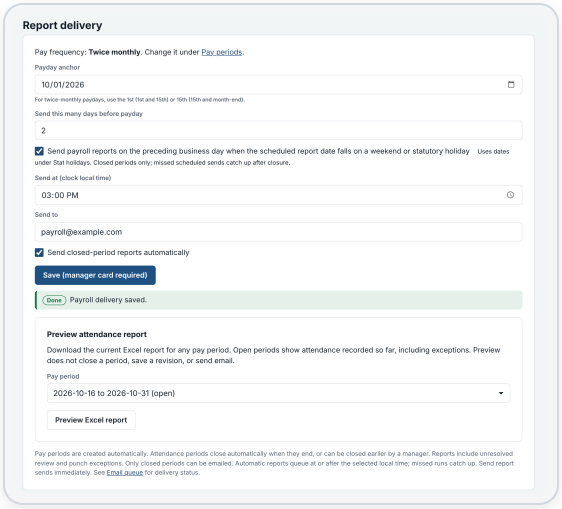

CHAPTER 6

The payroll report

The payroll report emails each closed period's workbook to your payroll contact. Set it up once under **Settings > Report delivery**.

- **Payday anchor**: a known payday. For twice-monthly pay, use the 1st (1st and 15th) or the 15th (15th and month-end).
- **Send this many days before payday**: 0 means on payday.
- **Send on the preceding business day** when the send date falls on a weekend or a stat holiday.
- **Send at**: the clock's local time.
- **Send to**: the payroll email address.
- **Send closed-period reports automatically**.

Select **Save (manager card required)** and tap your manager card.

Report delivery, saved after the card tap

> **Only closed periods are sent**
>
> If a report's send time passes before its period closes, it goes out on the next check after closing. To send one straight away, select **Send report** on a closed period under Pay periods. A new revision doesn't send a new email by itself; select **Send report** to send it.

Preview attendance report

On the same page, choose any period and select **Preview Excel report**. Open periods show what's recorded so far. A preview doesn't close the period, save a revision or send email.

The pay frequency is shown at the top and is changed under Pay periods (Chapter 5). Delivery status is in Settings > Email queue.

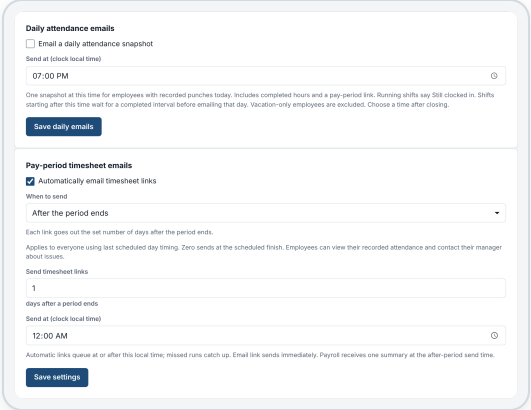

CHAPTER 7

Employee emails and links

Settings > Employee emails and links controls the daily snapshot and the pay-period timesheet links.

Daily attendance emails NEW

Tick **Email a daily attendance snapshot**, choose a send time (default 7:00 PM) and select **Save daily emails**. It's off by default. Each employee with punches that day gets one email with their IN and OUT times, completed hours and their timesheet link. A shift still running says **Still clocked in**. Choose a time after your workplace closes.

Daily emails off; links one day after the period ends

Pay-period timesheet emails

When to send has two choices:

- **After the period ends**: the set number of days after the period ends, at the set time.
- **On each employee's last scheduled day**: the set number of hours before their final scheduled shift ends. People with no scheduled day in the period, and vacation-only staff, get theirs after the period ends.

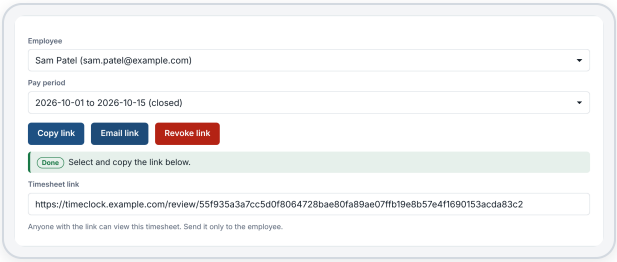

Select **Save settings**. **This period** shows when each person's link will go out and its status.

Sending a link yourself

Below the table, choose the employee and the pay period.

- **Copy link** shows the link so you can copy it.
- **Email link** emails it straight away.
- **Revoke link** stops the link working. The next Copy or Email creates a new one.

Copy and Email reuse the same link. Links last 14 days from issue, and a newly queued period email extends that. Anyone with the link can view the timesheet, so send it only to the employee.

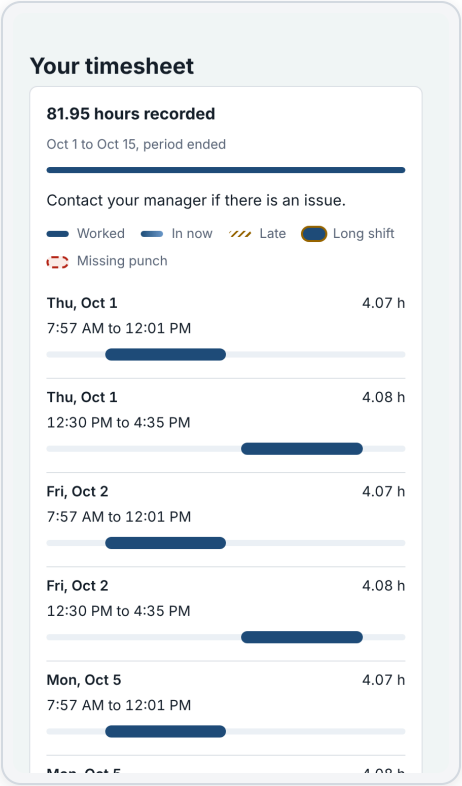

Sam's link for October 1 to 15

What employees see

The timesheet link opens a read-only page on the employee's phone or computer. It shows the hours recorded for the period, each shift with its times, and any late, missing-punch, holiday, vacation or absence entries.

There is nothing for the employee to approve. If something is wrong, they contact you, and you correct it on Attendance. The same link then shows the corrected record.

A link stays readable after the period closes, until it expires or you revoke it.

Sam's timesheet link on a phone

Who gets what

EMAIL	GOES TO
Welcome, with vacation link	New employee
Late arrival, early departure	Employee and every active manager
No IN, no OUT	Employee
Recorded hours corrected	Employee
Daily snapshot, timesheet link	Employee
Vacation request received	Employee and managers
Vacation decision or cancellation	Employee
Clock not reporting, reconnected	Every active manager
Payroll report, links queued, delivery failure	Payroll address

CHAPTER 8

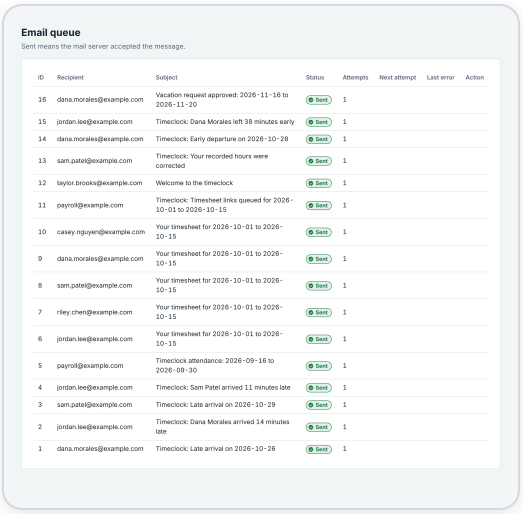

Email

Settings > Email queue

Every email the clock sends is listed here, newest first.

⚠ Waiting	Queued or being retried.
✓ Sent	The mail server accepted it. That doesn't prove someone read it.
✗ Failed	Delivery gave up. Read the error, fix the cause (often the address or mail settings), then select **Retry**.

An email that couldn't be prepared (for example a missing address) is listed separately. Fix the cause, or dismiss the warning.

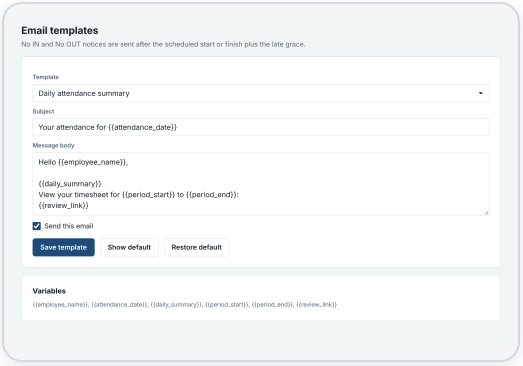

Email queue

Settings > Email templates

Choose a template, edit its subject and wording, and select **Save template**. Untick **Send this email** to turn one off. Words in double braces, such as `{{daily_summary}}`, are filled in automatically; **Variables** below the template lists the ones it can use. **Show default** shows the original wording. **Restore default** puts it back and needs a manager card tap.

New in this version: **Daily attendance summary**, **Clock not reporting (manager)** and **Clock reconnected (manager)**. The automatic and manual timesheet emails share one **Timesheet link** template.

The Daily attendance summary template

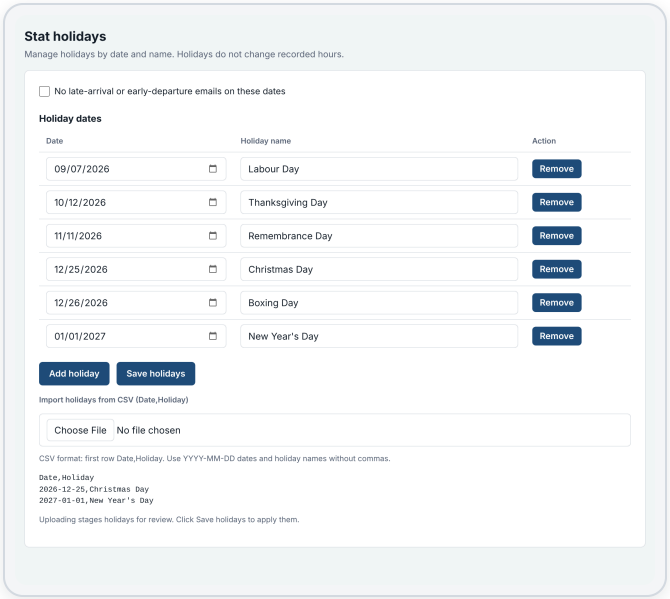

Settings > Outgoing email

The mail server, port, connection security (STARTTLS, SSL/TLS, or None for a trusted network only), sign-in, sender name and From address used for all messages. Use **Send a test email** after any change and check the Email queue.

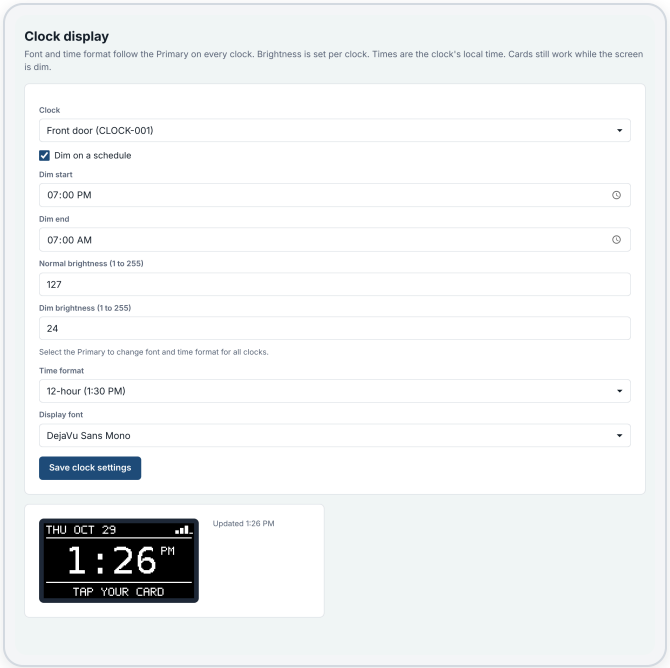

CHAPTER 9

Other settings

PAGE	WHAT IT DOES
Settings > Stat holidays	Add holidays by date and name, or import a CSV (Date,Holiday), then select **Save holidays**. An import is only staged until you save. Holidays appear on timesheets and are left out when counting vacation days. Tick **No late-arrival or early-departure emails on these dates** if needed. Holidays don't change recorded hours.
Settings > Clock display	Brightness for each clock, with optional dimming on a schedule (default 7:00 PM to 7:00 AM). Select the Primary to set the **Time format** (12-hour or 24-hour) and font for every clock. A live preview of the clock's screen is on this page. Cards still work while dim.
Settings > Late grace and repeat taps	Grace and repeat-tap window for each clock (Chapter 2).
Settings > Bulk schedules	The schedule editor with an employee list, for updating several people (Chapter 2).
Pay periods > Attendance period schedule	Pay frequency (Chapter 5). Also linked from Settings.
Settings > Manager accounts	Create, reset, lock or unlock manager sign-ins (manager card required). Passwords need 12 or more characters. Change your own password here.
Settings > Manager cards	Register a manager card to your account (Start here).
Settings > Raw swipe export	Card swipes for one or all employees over a date range, as CSV or JSON, with correction status and the company Employee ID. Manager-added punches aren't included. Use the payroll workbook for payroll.

Stat holidays

Clock display with its live preview

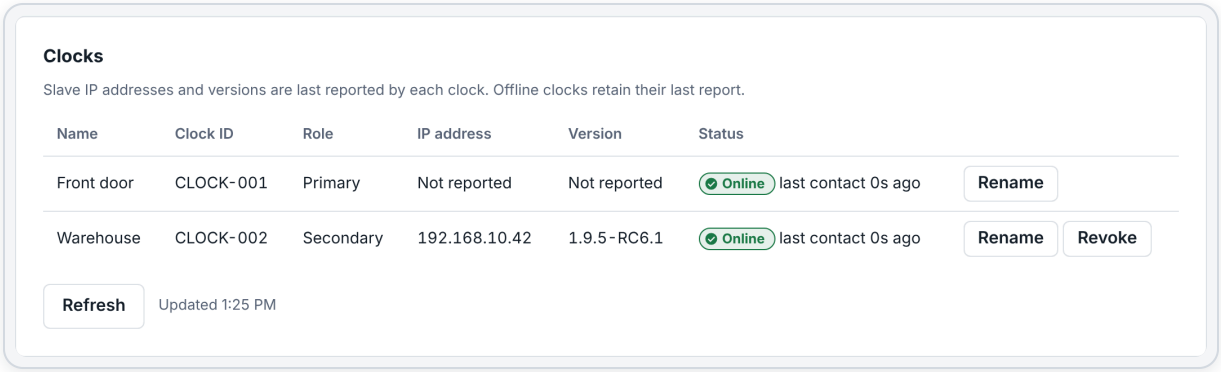

CHAPTER 10

The clocks and their records

These pages are mostly for your IT contact, but it helps to know what they show.

Settings > Clock management NEW IN RC6.1

Each clock with its name, ID, role, **IP address**, software **Version** and status. A Secondary reports its own address and version every 30 seconds; the page refreshes every 15 seconds, or select **Refresh**. An offline clock keeps the last address and version it reported. **Not reported** means the clock hasn't sent one: the Primary's own row always shows this, and so does a Secondary still running older software. Update the Primary and every Secondary together.

The Warehouse clock reports 192.168.10.42, running 1.9.5-RC6.1

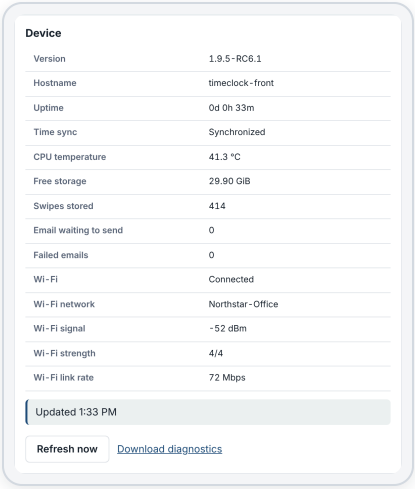

- **Rename** changes the name shown on every page and in emails. **Revoke** stops a Secondary from sending punches.
- To add a Secondary, select **Generate code**, enter the code on the new clock's setup page within 10 minutes, then select **Approve** on its request under **Waiting for approval**.
- If a clock stops reporting for 3 minutes, every active manager is emailed, and again when it reconnects. A Secondary that can't reach the Primary shows OFFLINE, keeps saving taps for cards it already knows, and chirps every five minutes. New cards can't be used while it's offline.

Settings > System health

Version, time sync, temperature, storage, swipes stored, email backlog and Wi-Fi, updated every 30 seconds. Anything flagged needs action.

> **Time sync shows Punches refused**
> The clocks reject taps until time is synchronized. Call IT right away.

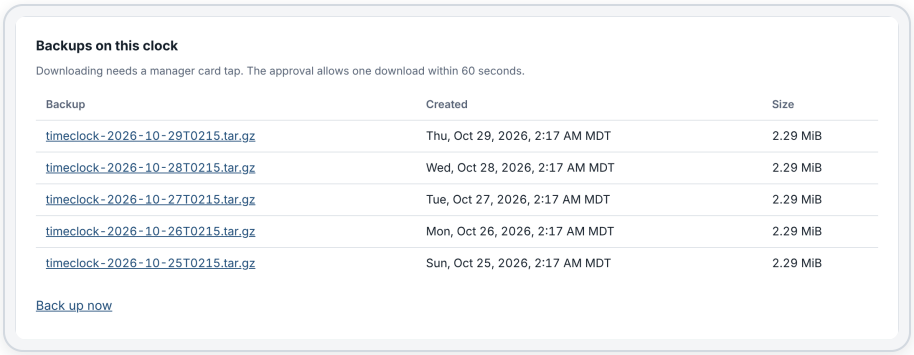

Settings > Diagnostics has the same readings in more detail, with the clock's activity log and a downloadable report for IT.

System health

Backups and the audit log

PAGE	WHAT TO KNOW
Settings > Backup and restore	The clock backs itself up every day at 02:15. Each clock keeps its own backups; there's no copying between clocks. You can email the daily backup to a manager (off by default), upload a backup file, or restore. Downloading needs a manager card tap and allows one download within 60 seconds. Restore needs you to type RESTORE and tap your card, and replaces everything recorded since that backup. Only do it with IT.
Settings > System operations	Restart the clock, shut it down, restart the timeclock services, or back up now. Each needs a manager card tap. The clock doesn't record punches until the action finishes.
Settings > Time sync and HTTPS certificate	Set by IT. Changing the time zone needs a manager card. The certificate's web address is the one used in employee email links.
Settings > Rejected uploads	Swipes a clock sent that the server refused, and out-of-order swipes kept for you to check. They don't count. Add a missed punch if one is needed.
Settings > Audit log	Who did what and when, in sections: vacation decisions, pay period reviews, absences, manager accounts, timesheet links, exports, backups, card replacements, email retries, employee and schedule edits, template restores, punch corrections and note revisions. The latest 50 of each are shown.

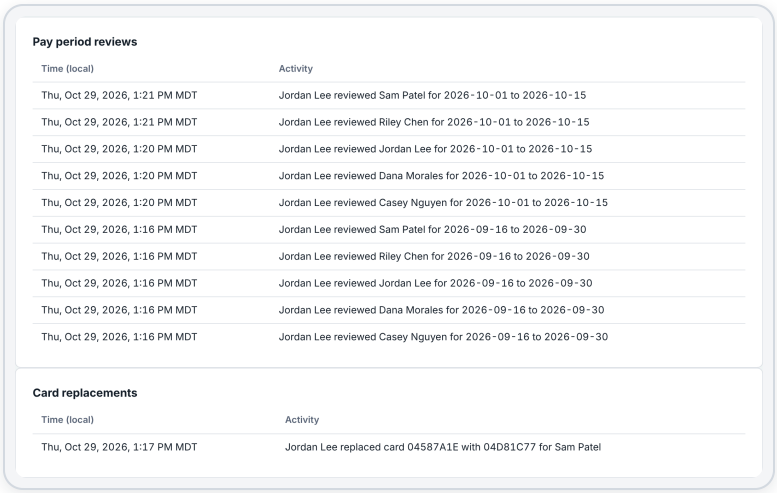

Backups on this clock

Downloading needs a manager card tap. The approval allows one download within 60 seconds.

Card replacements

Time (local)	Activity
Thu, Oct 29, 2026, 1:17 PM MDT	Jordan Lee replaced card 04587A1E with 04D81C77 for Sam Patel

Audit log entries from the reviews and the card replacement in this guide

QUICK REFERENCE

Common tasks

I NEED TO	GO TO
Add a new hire	Employees > Add employee, then their Schedule
Find an employee	Employees > Search by name
Give someone a replacement card	Employees, open the person, Cards > Replace
Deal with someone leaving	Employees, open the person: untick Active (manager card), then Deactivate their card
Add a forgotten IN or OUT	Attendance > Add missed punch
Remove an accidental punch	Attendance > Void
Explain an approved late or early punch	Attendance > Manager note
Record a sick day	Attendance > Recorded absences
Approve or deny vacation	Vacation
Record vacation approved by phone or email	Vacation > Record vacation
Send someone their timesheet again	Settings > Employee emails and links > Email link
Send someone a vacation link	Employees, open the person, Send vacation link
Review a pay period	Pay periods > Review > Mark reviewed for each employee
Save the payroll report	Pay periods > Create export / revision
Resend the payroll report	Pay periods > Send report (closed periods only)
Change the grace period	Settings > Late grace and repeat taps
Check an email was sent	Settings > Email queue
Add a stat holiday	Settings > Stat holidays
See a clock's IP address or version	Settings > Clock management
See who changed something	Settings > Audit log

What changed since the RC3 guide

- The menu is now Overview, Attendance, Employees, Pay periods, Vacation and Settings. Device pages, timesheet links and setup pages are under Settings.
- Cards, card replacement and schedules are inside each employee's record. The separate Card status and Who is in pages are gone.
- Pay periods close automatically. Employees no longer approve timesheets; managers use **Mark reviewed**, with no override.
- New: daily attendance snapshot emails, last-scheduled-day link timing, Copy and Revoke link, 12 or 24-hour clock display, clock outage emails, and in RC6.1 each Secondary's IP address and version on Clock management.

> **About the examples**
> The screenshots come from the actual timeclock software (1.9.5-RC6.1) running on sample data. The names, card numbers and addresses are made up.
