ICUBE DEVELOPMENT (CALGARY) LTD.

Timeclock Manager Guide

Daily checks, employees and cards, punch corrections, late and early flags, vacation, and closing each pay period.

START HERE

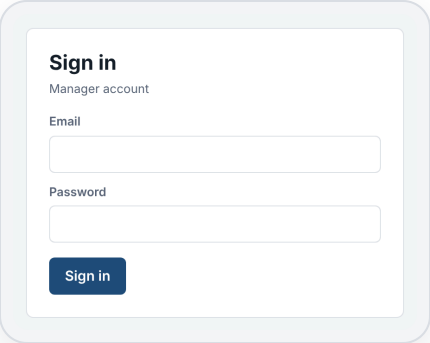

How the manager site works

You manage the timeclock from a web browser on the company network. Some changes also need your manager card, tapped on a clock.

Signing in

1. Open the clock's web address in your browser, for example *https://timeclock.example.com/login*.
2. Enter your work email and password, then select **Sign in**.
3. You stay signed in for up to 8 hours. Select **Sign out** (top right) when you finish on a shared computer.

Forgot your password? Another manager can reset it under **People > Manager accounts**. You can change your own password on the same page.

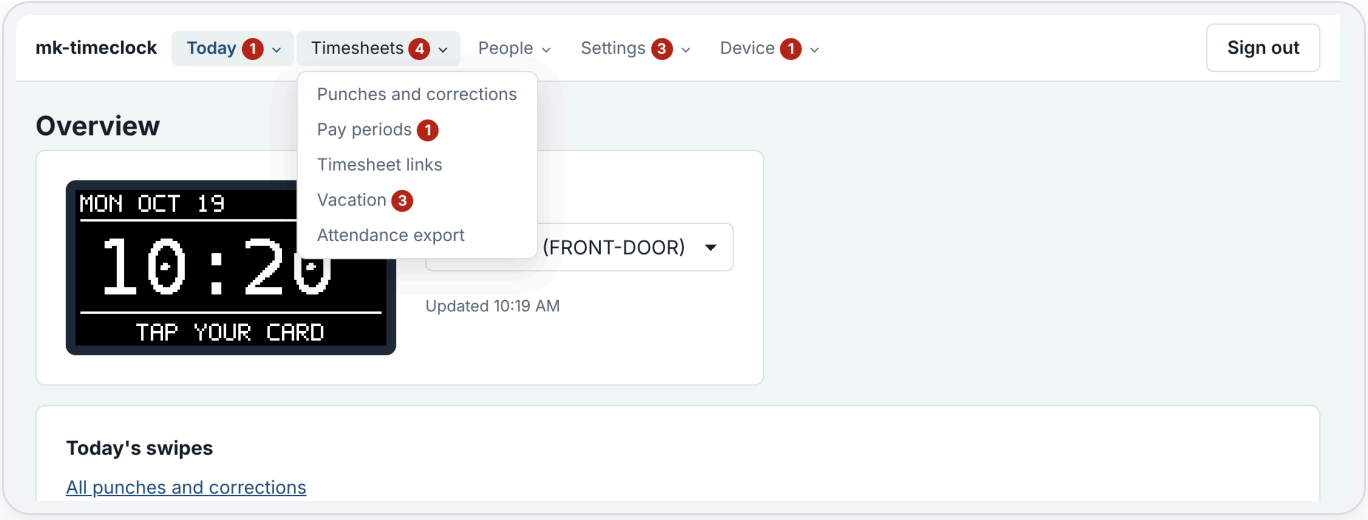

Manager sign-in

The menu and red numbers

The menu has five groups: **Today**, **Timesheets**, **People**, **Settings** and **Device**. A red number on a group, and on a page inside it, counts things that need a person to look at them, such as a pay period that ended without being closed or a vacation request waiting for a decision. The pages use the same colours:

Problem	Something is wrong or blocked. Fix it before payroll.
Check, Waiting, Late, Left early	Needs your review or decision, but nothing is broken.
Done, Approved, Online	Finished or working normally.

The Timesheets menu open, with counts on Pay periods and Vacation

START HERE, CONTINUED

Your manager card

Your manager card is a separate card from any attendance card. It never records attendance. Its job is to prove that a manager is physically at a clock before the system makes a protected change.

Approving a change

Manager card tapped at other times. Nothing is recorded.

When a card tap is needed

- Making someone a manager, or changing whether an employee is Active
- Deactivating or reactivating a card
- Creating, resetting, locking or unlocking a manager sign-in
- Saving Payroll report delivery settings
- Restoring a default email template
- Changing the time zone
- Downloading or restoring a backup, and System operations (restart, shut down)

How it works

1. Select the button on the web page. Buttons that need a card usually say **(manager card required)**.
2. The page shows **Tap your manager card on the clock within 30 seconds.**
3. Tap your manager card on a clock. It shows **APPROVED / ACTION AUTHORIZED**.
4. The web page confirms the change, for example Done **Payroll delivery saved.** If 30 seconds pass first, it says **Time ran out. Try again.**

Registering a manager card

Under **People > Manager cards**, select **Scan a card (30 seconds)**, tap the new card on a clock, then select **Register this card**. Keep manager cards secure. Anyone holding one can approve protected changes.

> **Never use your manager card to punch in**
>
> Use a separate attendance card for your own hours. A manager card tap never counts as attendance.

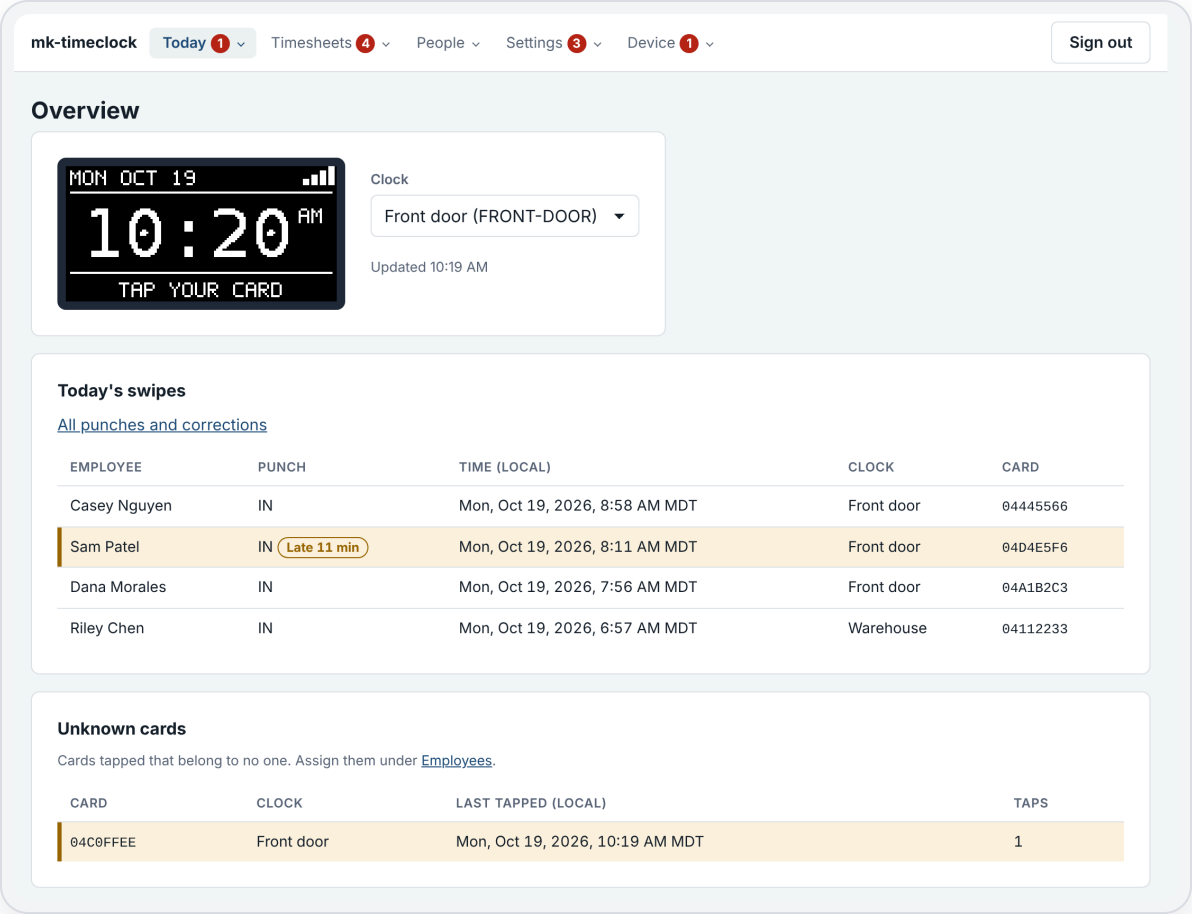

CHAPTER 1

Daily checks

A quick look each morning catches most problems while they are still easy to fix.

Today > Overview

Shows a live copy of the selected clock's screen with its last update time, today's swipes (with Late and Left early flags), and any unknown cards.

Overview: Sam tapped in 11 minutes late and an unknown card was tapped at the front door

Today > Who is in

An estimate based on each person's latest punch. It refreshes every 10 seconds. It is **not** an evacuation roll count, because people who forgot to tap appear wrong.

Today > Unknown cards

Cards that were tapped but don't belong to anyone. Usually a new hire's card. Copy the card number into the employee's record (Chapter 2), then select **Clear all unknown cards**.

> **Daily checklist**
>
> Open the Overview. Look for red numbers in the menu. Check Unknown cards. If a clock shows Offline, its taps are being saved on that clock and will arrive when it reconnects.

CHAPTER 2

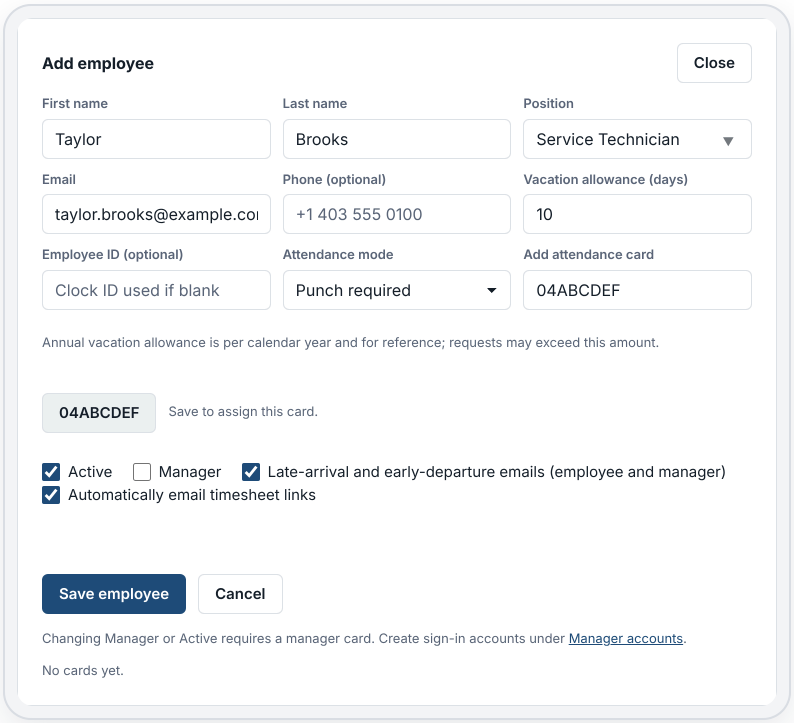

Employees and cards

Adding an employee

1. Go to **People > Employees** and select **Add employee**.
2. Enter first name, last name, position and work email. The email is used for timesheet, late-arrival, early-departure and vacation messages.
3. Optional: enter your company's **Employee ID**. Leading zeros and letters are kept. It appears on payroll reports, emails and vacation lists. If you leave it blank, the clock's own number is used. Two people can't share an ID.
4. Optional: enter a **Vacation allowance (days)** in whole or half days. Blank means unspecified and zero means zero. It's for reference only and doesn't limit requests.
5. Choose the **Attendance mode**. **Punch required** is normal. **Vacation only** is for staff who track vacation but don't tap in.
6. Select **Scan card (30 seconds)** and tap the new card on any clock. The card number appears on the button. You can also type a number from Unknown cards.
7. Select **Save employee**.

The new employee gets a welcome email with the vacation address. The list flags No schedule until you set one (next page).

The checkboxes control late-arrival and early-departure emails, and automatic timesheet links, for this person. Ticking **Manager** or changing **Active** needs a manager card tap. A manager also needs a sign-in, created under **Manager accounts**.

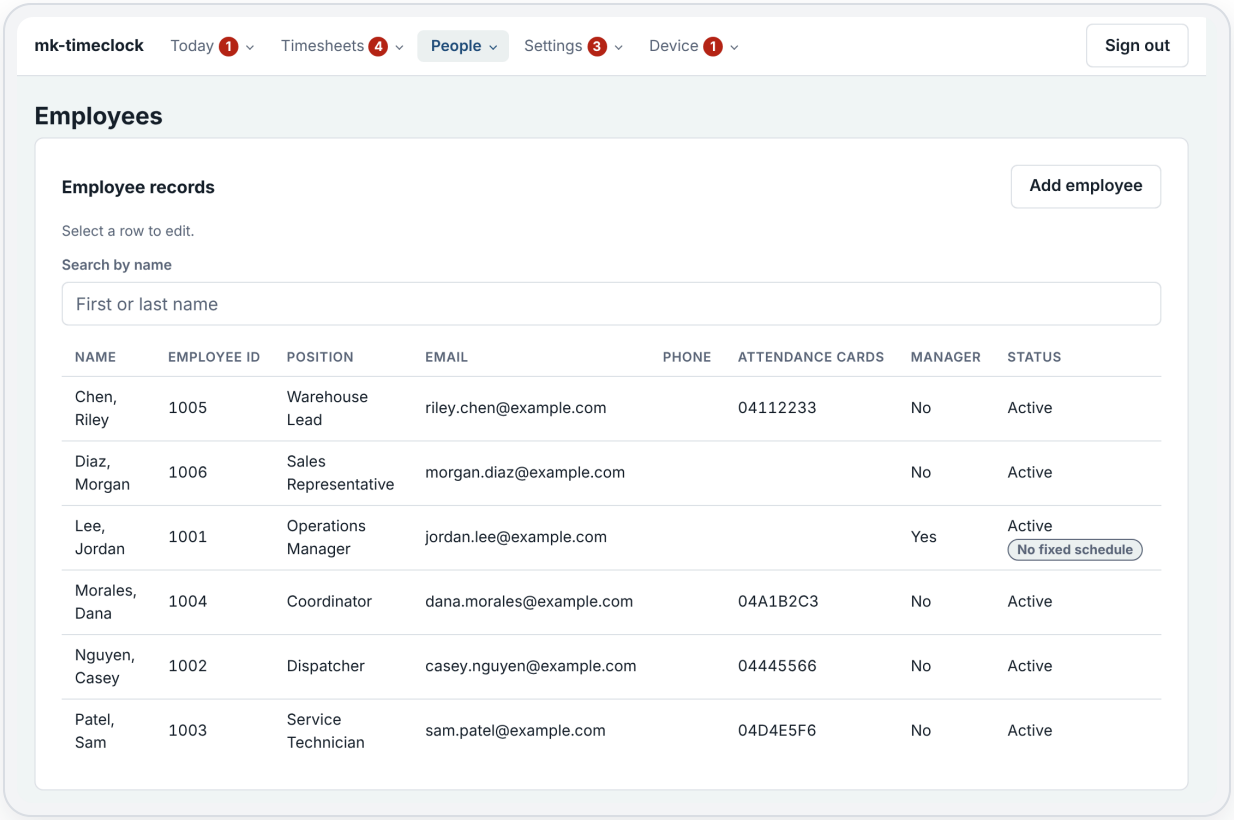

Adding Taylor Brooks with a scanned card

Finding people and replacing cards

Finding someone

Type in **Search by name** above the list. It matches first or last names in either order and includes inactive employees. Select a row to edit that person. The **Employee ID** column shows each person's company ID.

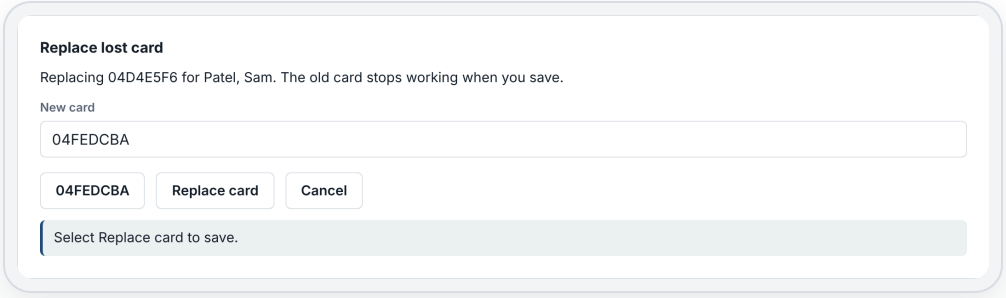

People > Employees

Lost or damaged cards

Go to **People > Card status** and select **Replace** next to the old card. Select **Scan new card (30 seconds)**, tap the new card on a clock, then select **Replace card**. The old card stops working and past punches are kept.

Deactivate stops a card without giving a new one, for example when someone leaves. It needs a manager card tap.

Replacing Sam Patel's card

Schedules and grace

A schedule tells the clock when each person is expected. It's used only for late-arrival, early-departure and missing-punch notices. It doesn't change recorded hours or pay.

1. Go to **People > Schedules** and choose the employee.
2. Choose a **Schedule type**:
   - **Recurring weekly**: tick the working days and set start and end times.
   - **Dated shifts**: enter specific shifts by date, for rotating schedules.
   - **No fixed schedule**: the person is never marked late or early and gets no missing-punch notices.
3. Select **Save schedule**.

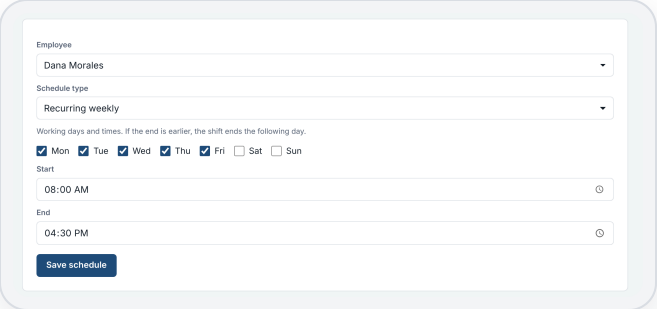

If the end time is earlier than the start, the shift ends the next day (overnight). Changes are logged, and punches already recorded aren't changed.

Late grace and repeat taps

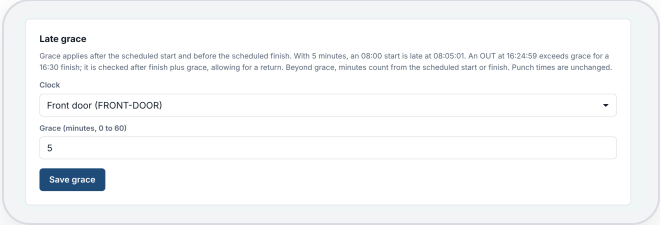

Under **Settings > Late grace and repeat taps**, each clock has two settings:

- **Grace** (default 5 minutes). It applies after the scheduled start and before the scheduled finish. With 5 minutes, an 8:00 start is late at 8:05:01, and a 4:30 p.m. finish is early at 4:24:59. Beyond grace, minutes count from the scheduled start or finish, rounded up.
- **Repeat window** (default 120 seconds). A second tap inside this window is logged but doesn't count as a punch. The employee sees ALREADY RECORDED.

Changing the grace doesn't change punches already recorded.

Dana Morales, Monday to Friday, 8:00 a.m. to 4:30 p.m.

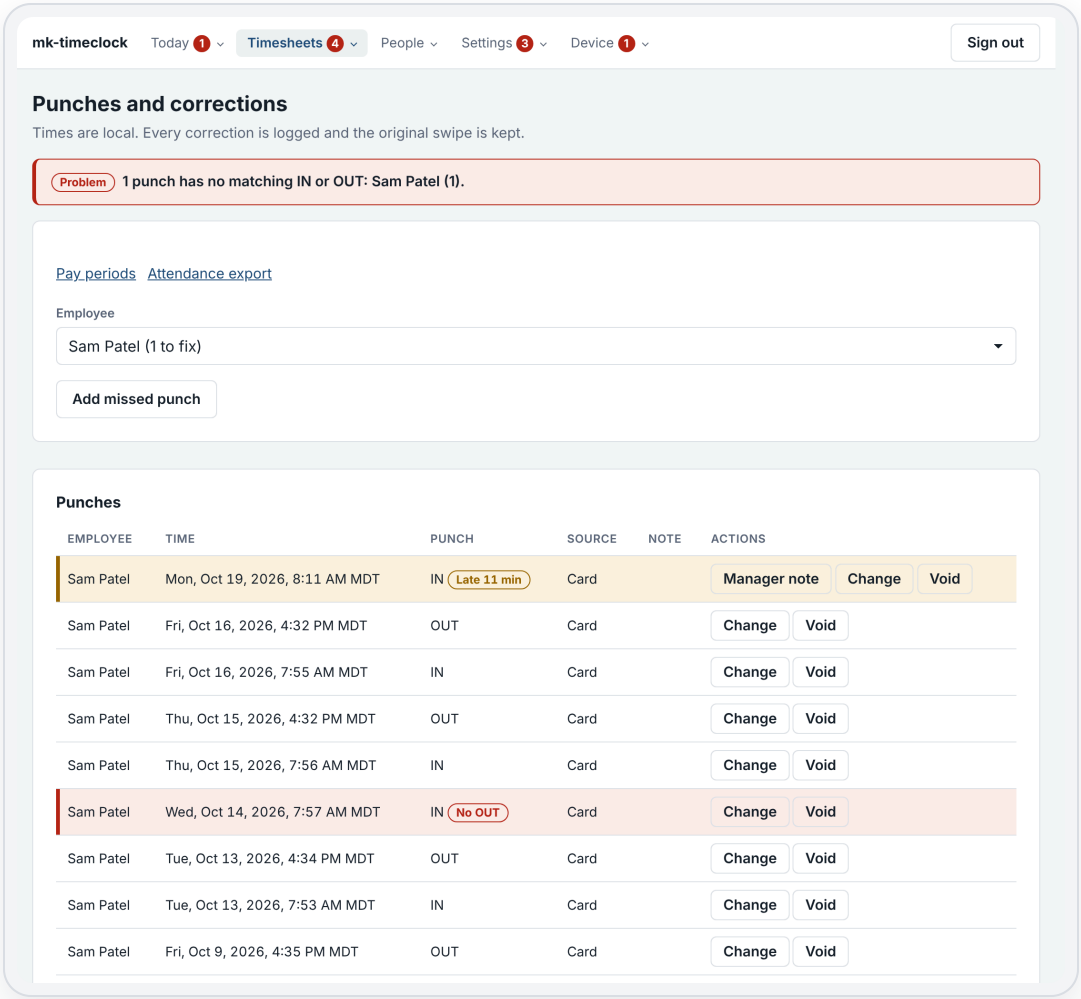

Grace for each clock

CHAPTER 3

Fixing punches

When someone forgets to tap, taps at the wrong time or reports a problem, fix it under **Timesheets > Punches and corrections**. The original swipe is always kept, and every correction is logged.

Sam Patel has an IN on Oct 14 with No OUT. The employee list says "1 to fix"

Find the problem

The red banner names everyone with an unpaired punch. Choose the employee; the list is in alphabetical order, and a name shows how many punches need fixing. Rows flagged No OUT or No IN are the ones to fix.

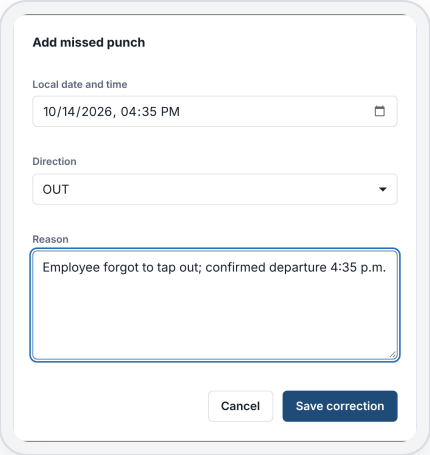

Ways to correct

- **Add missed punch**: adds an IN or OUT the person forgot.
- **Change**: moves a punch to the correct time or direction.
- **Void**: removes a punch from the hours, such as an accidental tap.
- **Manager note**: on a late or early punch, records why it was approved (Chapter 3, Late and early).

Adding a missed punch

1. Choose the employee and select **Add missed punch**.
2. Enter the local date and time, and the direction (IN or OUT).
3. Enter a reason of at least 5 characters, for example who confirmed the time.
4. Select **Save correction** and confirm.

The added punch shows Added by manager and the source **Manager**. On the employee's timesheet it appears as Manager-added punch. The employee is emailed that their recorded hours were corrected.

Sam's missing OUT

> **Corrections after a period closes**
>
> Closed periods can still be corrected. The period is then flagged Changed after close. Reapprove the affected employee and create a new export revision (Chapter 5).

Punches

EMPLOYEE	TIME	PUNCH	SOURCE	NOTE	ACTIONS
Sam Patel	Mon, Oct 19, 2026, 8:11 AM MDT	IN Late 11 min	Card		Manager note · Change · Void
Sam Patel	Fri, Oct 16, 2026, 4:32 PM MDT	OUT	Card		Change · Void
Sam Patel	Fri, Oct 16, 2026, 7:55 AM MDT	IN	Card		Change · Void
Sam Patel	Thu, Oct 15, 2026, 4:32 PM MDT	OUT	Card		Change · Void
Sam Patel	Thu, Oct 15, 2026, 7:56 AM MDT	IN	Card		Change · Void
Sam Patel	Wed, Oct 14, 2026, 4:35 PM MDT	OUT Added by manager	Manager		Change · Void
Sam Patel	Wed, Oct 14, 2026, 7:57 AM MDT	IN	Card		Change · Void
Sam Patel	Tue, Oct 13, 2026, 4:34 PM MDT	OUT	Card		Change · Void

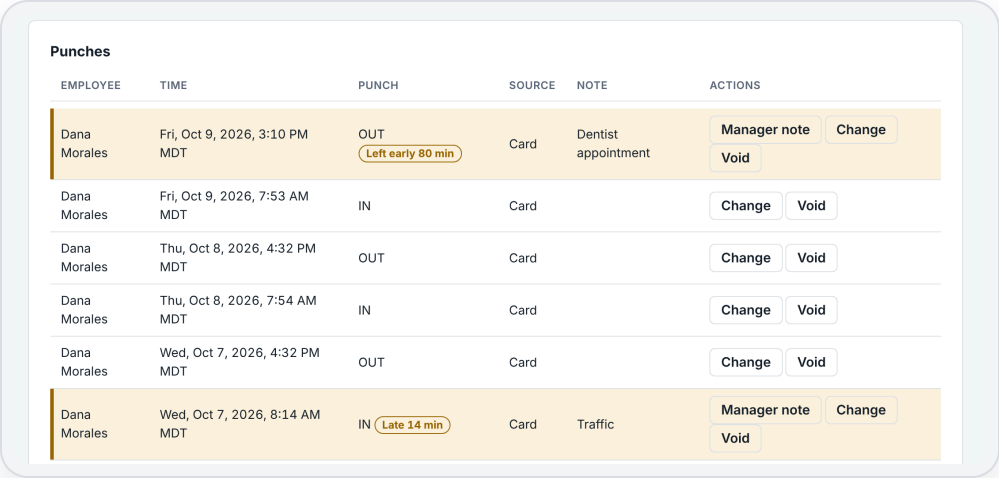

After saving: the Oct 14 shift is complete

Recorded absences

On the same page, **Recorded absences** explains a missed day (sick, medical appointment, bereavement, unexcused and so on) without creating punches or paid hours. Absences appear on the employee's timesheet. An excused full-day absence also stops late and early flags for that day. Record vacation on the Vacation page instead (Chapter 4). **Don't enter medical details** in the note.

Late and early

The clock flags late arrivals and early departures against each person's schedule and the clock's grace (Chapter 2). Flags never change punch times or hours.

Dana's late arrival on Oct 7 and early departure on Oct 9, each with her reason

Late arrival

Only the first tap in for a shift can be late. Returning from lunch is never late. The clock shows LATE, and the employee and every active manager are emailed straight away.

Early departure

Checked shortly after the scheduled finish plus grace. If the employee tapped back in before then, the earlier tap out was a break and isn't flagged. A real early departure gets **Left early** and the same two emails. For an overnight shift, the finish is the next morning.

Reasons and manager notes

The employee can add a reason from the link in their email; it appears in the **Note** column. To record your own explanation, select **Manager note** on the flagged punch. Notes are audited and appear in the payroll report as *Manager note*.

Corrections and flags

Changing or adding an IN recalculates its lateness. Changing or adding an OUT recalculates the early departure, after the shift's finish if you correct it during the day. Correcting an IN keeps a real early departure on its OUT. Corrections don't send new late or early emails.

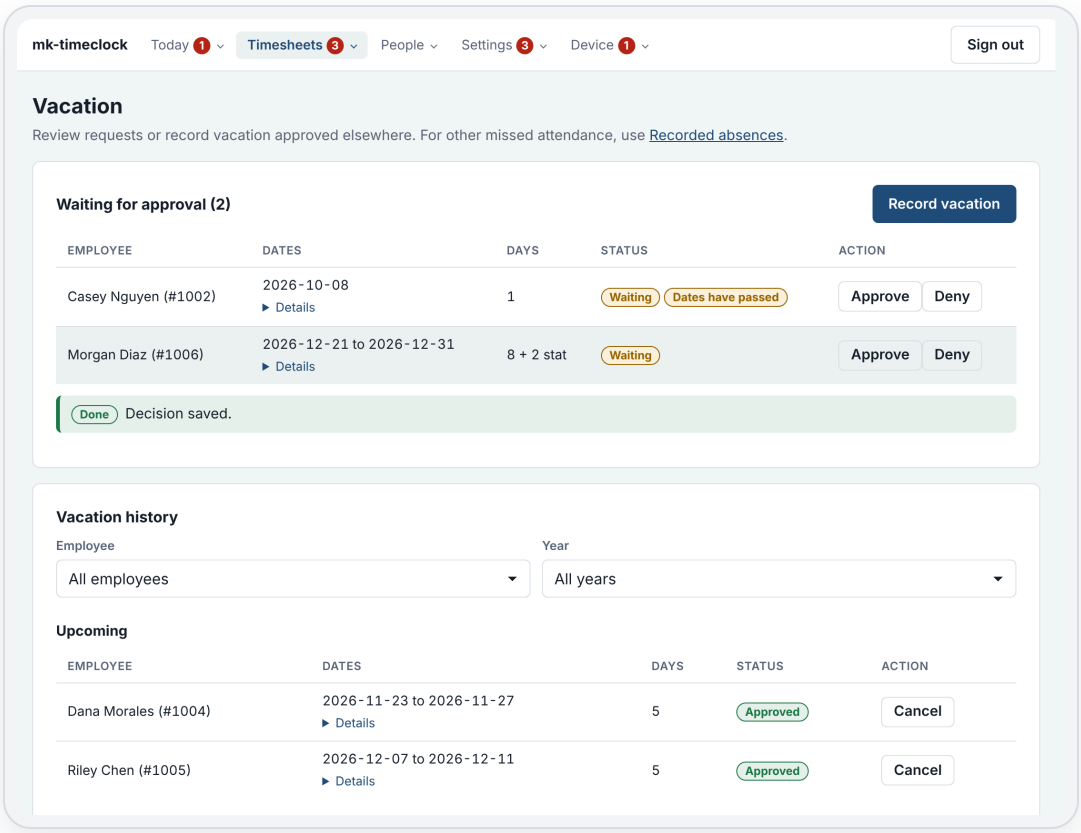

No flags on approved full-day vacation, excused absences, or days without a schedule. Untick the employee's late-arrival and early-departure emails to keep the flags but stop the emails.

CHAPTER 4

Vacation

Employees request vacation from their own private page. Requests appear under **Timesheets > Vacation** in **Waiting for approval**, and you also get an email.

1. Read the dates and number of days. Select **Details** for the return date, the employee's notes and any stat holidays inside the request.
2. Select **Approve** or **Deny**. Your browser asks for a manager note (optional). The employee sees the note.
3. The page shows Done **Decision saved.**, the request moves to Vacation history, and the employee is emailed.

Dana's November vacation approved with a note

Dates have passed marks a request still waiting after its last day. Nothing expires on its own; approve or deny it.

Days show stat holidays separately, for example **8 + 2 stat**. Stat holidays aren't counted as vacation.

Cancel withdraws an approval you already gave. The employee is emailed and told to contact you about their schedule.

Vacation history is split into Upcoming and Past, with Employee and Year filters.

Annual vacation report: choose a year and select **Download Excel-compatible CSV**. It lists approved vacation in that calendar year, including future bookings, with used and allowed days for each person.

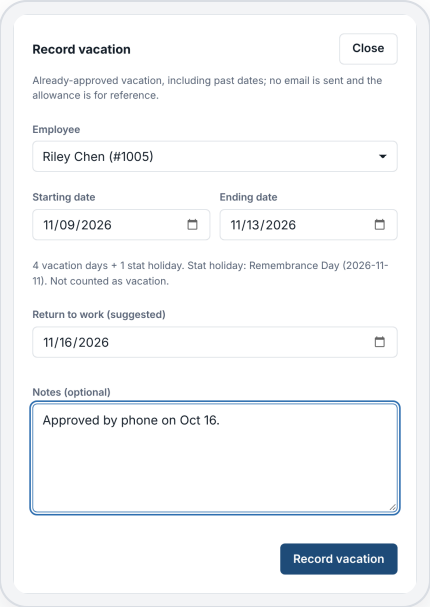

Approved vacation appears on the employee's timesheet and in the payroll report. It doesn't add hours. Allowances are informational. There's no accrual and no limit.

Recording vacation

When vacation was approved by phone or email, or before the clock was installed, record it yourself.

1. Select **Record vacation**.
2. Choose the employee and the starting and ending dates. Inactive employees can be chosen for past dates.
3. Check the calculated days, for example **4 vacation days + 1 stat holiday**, and the suggested return date.
4. Add a note if you want, then select **Record vacation**.

It's saved as Approved and audited under your name. No email is sent.

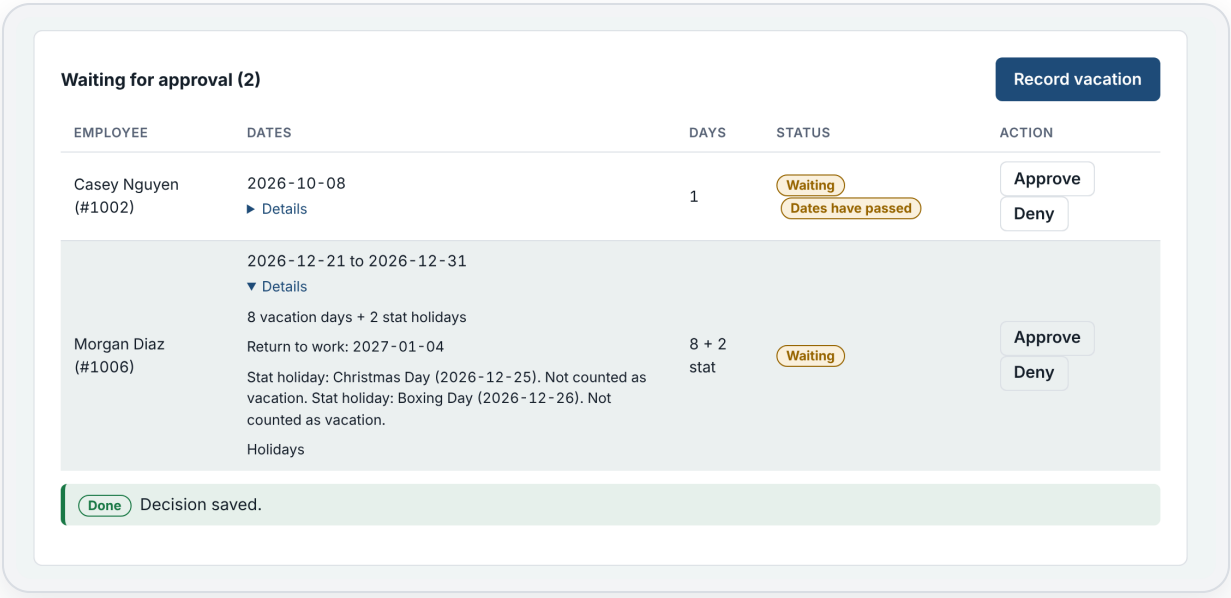

Recording Riley's vacation, approved by phone

> **Vacation only**
>
> The Vacation page is for vacation. Record sick days and other missed attendance under **Recorded absences** (Chapter 3).

Stat holidays in a request

The **Details** of a request name each stat holiday inside it. Changing a holiday or a schedule later updates the current count. The originally requested count is kept, and Details explains any difference.

Details open on Morgan's request: 8 vacation days + 2 stat holidays

CHAPTER 5

Closing a pay period

At the end of each pay period you check everyone's hours, approve them and close the period. Closing locks in the report sent to payroll.

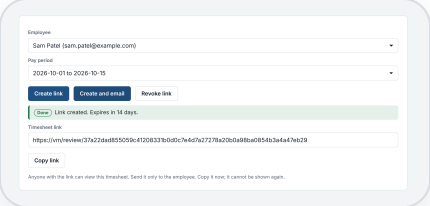

STEP	WHERE	WHAT HAPPENS
1. Timesheet links go out	Automatic	The day after the period ends, each employee is emailed a private timesheet link (Timesheets > Timesheet links).
2. Employees approve	Employee's phone	Employees check their hours and approve, or report a problem.
3. Fix problems	Punches and corrections	Add missing punches and answer any reported problems.
4. Manager approval	Pay periods > Review	Approve each employee, or override when they haven't approved.
5. Close	Pay periods	Close the period and create the export.
6. Report to payroll	Automatic, or Send report	The payroll report is emailed before payday (Chapter 6).

A shift that crosses midnight counts in the pay period of its IN date.

Timesheet links

Automatic links are on by default and go out 1 day after the period ends. Change the day and time under **Timesheets > Timesheet links**.

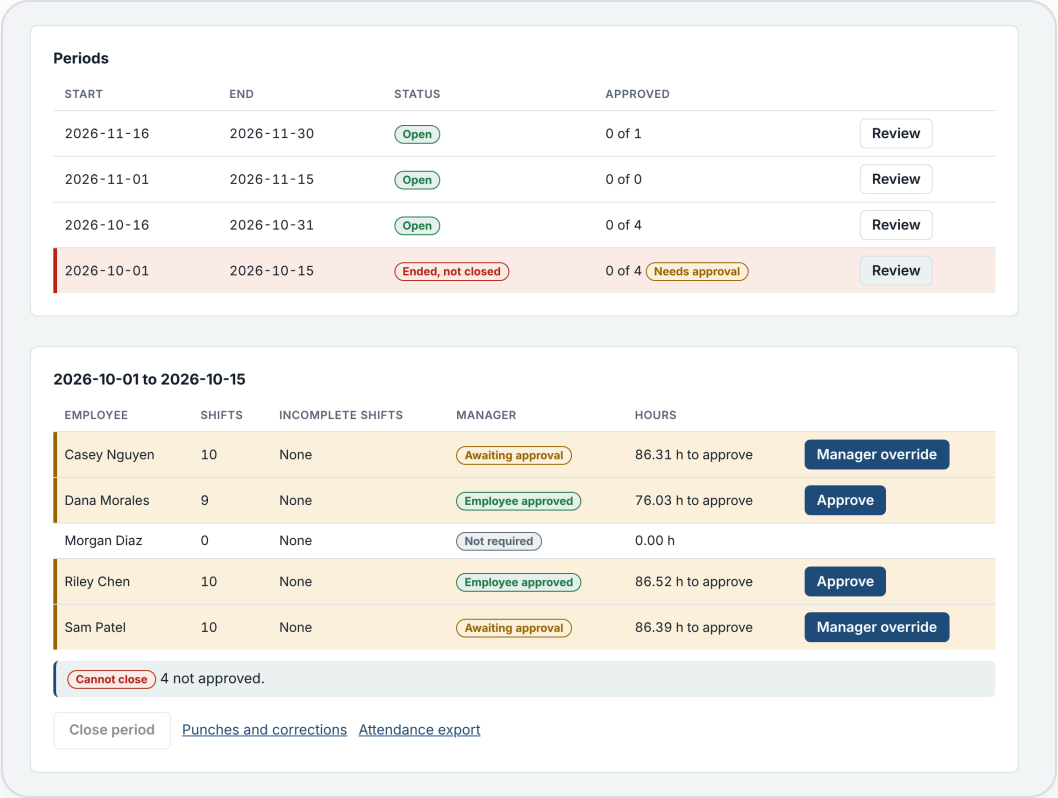

To send one yourself, choose the employee and period, then select **Create and email**. **Create link** shows the link without emailing it, so copy it straight away because it can't be shown again. A new link cancels the earlier one. Links expire after 14 days.

A new link for Sam Patel

Reviewing and approving

Go to **Timesheets > Pay periods**. A period that has ended but isn't closed is shown in red as Ended, not closed. Select **Review** on that row.

October 1 to 15: two employees approved, two did not, and Morgan needs no approval

MANAGER COLUMN	MEANING	BUTTON
Employee approved	The employee confirmed their hours.	**Approve**, then confirm.
Awaiting approval	The employee hasn't approved.	**Manager override**. Enter a reason of at least 5 characters. The employee is emailed that you approved without their confirmation.
Changed since approval	Hours or leave changed after approval.	Review and approve again.
Fix punches	The employee has an unpaired punch.	No button until you fix it under Punches and corrections.
Not required	Vacation-only employee with no punches in the period.	None. It doesn't block closing. If they tapped the clock in the period, approval is required as usual.

Below the table, Cannot close lists what's still blocking, for example **4 not approved**. When everything is approved it says **Ready to close.**

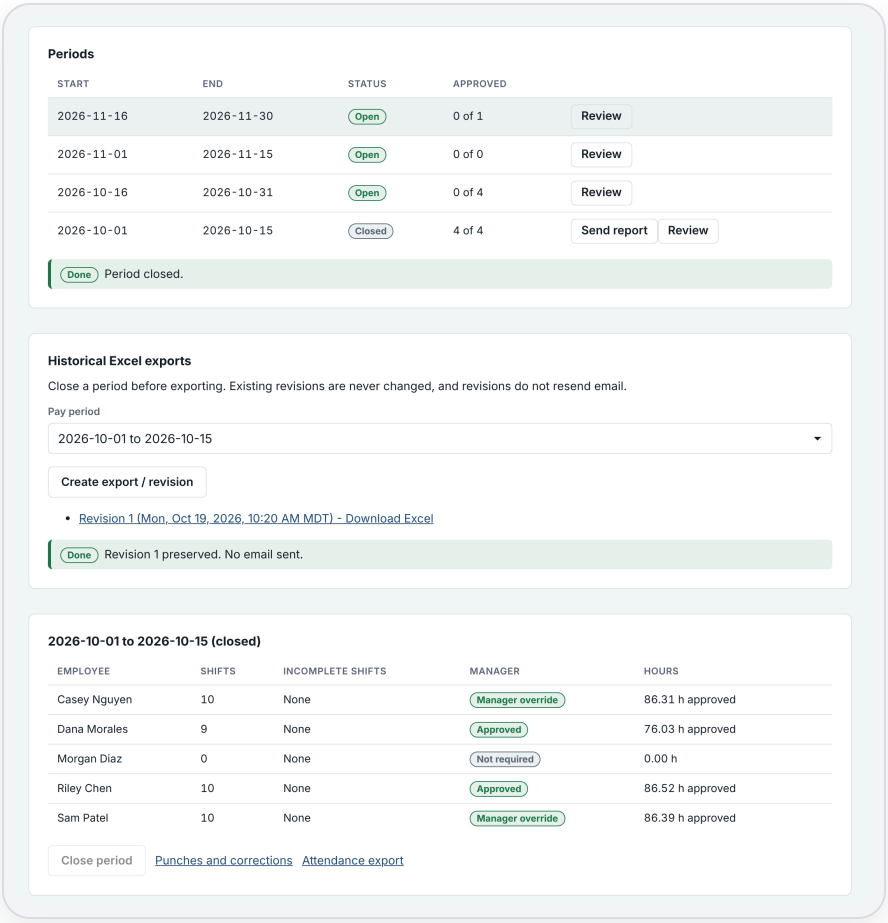

Closing and exporting

1. When it says **Ready to close.**, select **Close period** and confirm. You're warned that later corrections need a new export revision.
2. Enter a reason, for example *Timesheets reviewed and approved.*
3. Under **Historical Excel exports**, choose the period and select **Create export / revision**. Revision 1 is saved. No email is sent.
4. Download the Excel file from the revision link if you need a copy.

The workbook has two tabs. **Payroll Summary** shows hours, leave, exceptions and annual vacation used for each employee. **Daily Detail** has one row per punch or record, with a status such as *Complete - late arrival* or *Complete - early departure*, and any reason or manager note.

Saved revisions never change. If you correct a closed period, the row shows Changed after close or New export required. Reapprove the employee and create the next revision.

The timeclock reports recorded attendance. It doesn't deduct breaks or calculate pay or overtime.

Closed, with Revision 1 saved

CHAPTER 6

The payroll report

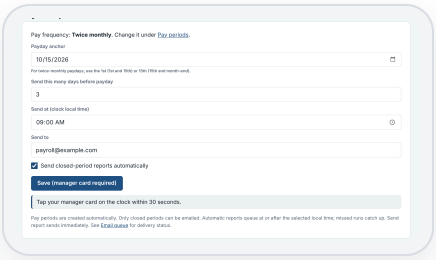

The payroll report emails the closed period's workbook to your payroll contact. Set it up once under **Settings > Payroll report**.

- **Payday anchor**: a known payday. For twice-monthly pay, use the 1st (1st and 15th) or the 15th (15th and month-end).
- **Send this many days before payday**: 0 means on payday.
- **Send at**: the clock's local time.
- **Send to**: the payroll email address.
- **Send closed-period reports automatically**.

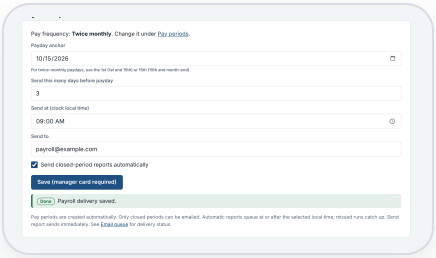

Select **Save (manager card required)** and tap your manager card.

> **Only closed periods are sent**
>
> If a period isn't closed by the send time, its report waits. It goes out on the next check after you close it. To send one straight away, select **Send report** on a closed period under Pay periods.

The pay frequency (twice monthly, every two weeks, weekly or monthly) is set under **Pay periods > Pay schedule**. Changing it replaces unused future periods only.

Waiting for a manager card tap

Saved after the tap

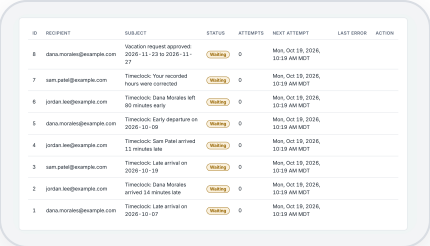

CHAPTER 7

Email

Settings > Email queue

Every email the clock sends is listed here.

Waiting	Queued or being retried.
Sent	The mail server accepted it. That doesn't prove someone read it.
Failed	Delivery gave up. Read the error, fix the cause (often the address or mail settings), then select **Retry**.

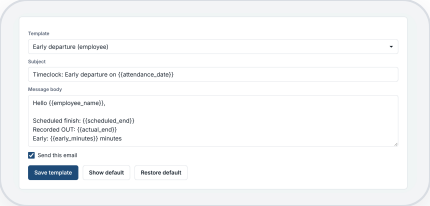

Email queue

Settings > Email templates

Edit the subject and wording of each message, or untick **Send this email** to turn one off. Words in double braces, such as `{{early_minutes}}`, are filled in automatically; the list below each template shows which ones it can use. **Show default** shows the original wording. **Restore default** puts it back and needs a manager card tap.

New in this version: **Early departure (employee)** and **Early departure (manager)**, on by default.

The Early departure (employee) template

Settings > Outgoing email

The mail server, sign-in, sender name and From address used for all messages. Use **Send a test email** after any change and check the Email queue.

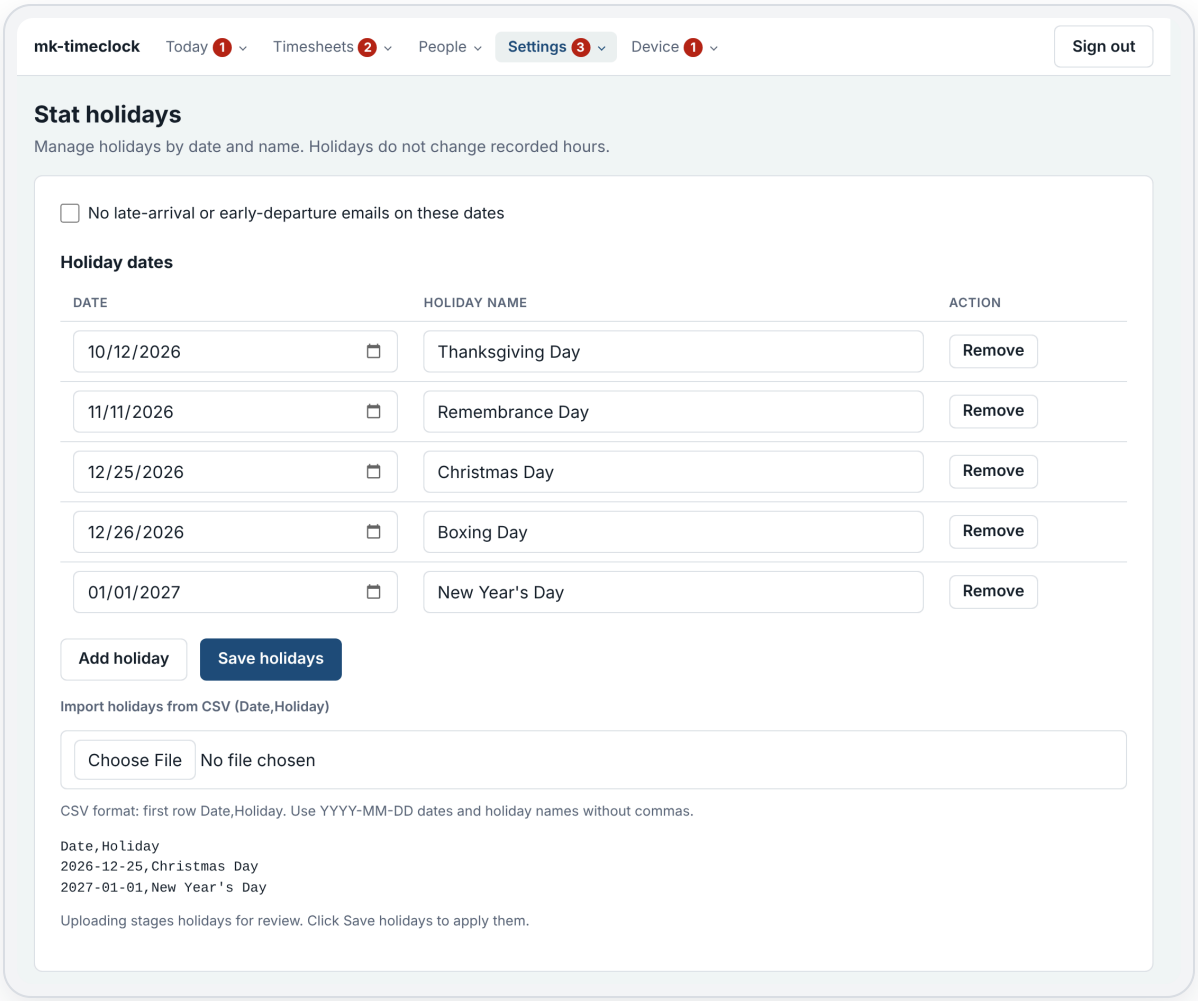

Messages managers receive

Late arrivals and early departures (when those emails are on for that employee), new vacation requests, and timesheet problems employees report from their timesheet link (subject *Timesheet review needs attention*). Answer reported problems under Punches and corrections.

CHAPTER 8

Other settings

PAGE	WHAT IT DOES
Settings > Stat holidays	Add holidays by date and name, or import a CSV (Date,Holiday). Holidays appear on timesheets and are left out when counting vacation days. Tick **No late-arrival or early-departure emails on these dates** if needed. Holidays don't change recorded hours.
Settings > Late grace and repeat taps	Grace and repeat-tap window for each clock (Chapter 2).
Settings > Clock display	Screen font and brightness for each clock, with optional dimming on a schedule. Cards still work while dim.
Timesheets > Attendance export	Card swipes for a date range as CSV or JSON, with correction status and the company Employee ID. Manager-added punches aren't included. Use the payroll workbook for payroll.
People > Manager accounts	Create, reset, lock or unlock manager sign-ins (manager card required). Passwords need 12 or more characters.

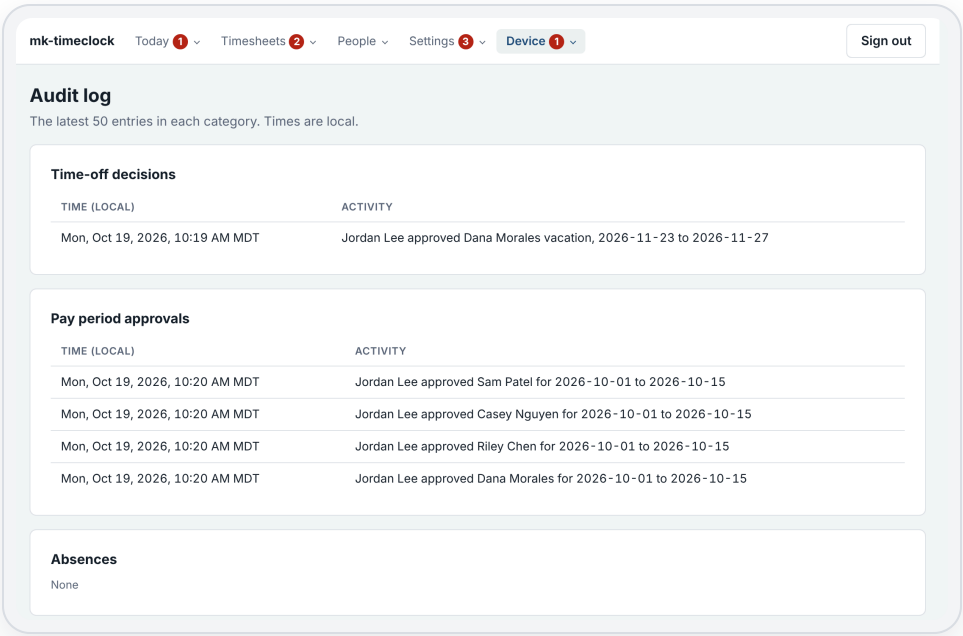

Stat holidays

CHAPTER 9

The device and its records

These pages are mostly for your IT contact, but it helps to know what they show.

PAGE	WHAT TO KNOW
Device > Clock management	Each clock and whether it's Online. An offline clock keeps saving taps and sends them when it reconnects. Rename clocks here. Adding another clock uses a setup code.
Device > System health	Time sync, storage, Wi-Fi and email backlog. If time sync shows Punches refused, the clocks reject taps. Call IT right away.
Device > Backup and restore	The clock backs itself up every day at 02:15. Email settings, upload and restore come first; the list of backups is at the bottom. Downloading needs a manager card tap. Restore replaces everything recorded since that backup. Only do it with IT.
Device > Audit log	Who did what and when: approvals, corrections, vacation decisions, manager notes, employee and schedule edits, exports and more.
Device > Rejected uploads	Swipes a clock sent that the server refused. They don't count. Add a missed punch if needed.
Device > System operations	Restart, shut down or back up now. Needs a manager card tap. The clocks don't record punches until the action finishes.
Settings > Time sync and HTTPS certificate	Set by IT. The certificate's web address is the one used in employee email links.

Audit log entries from the pay period close in this guide

QUICK REFERENCE

Common tasks

I NEED TO	GO TO
Add a new hire	People > Employees > Add employee, then People > Schedules
Find an employee	People > Employees > Search by name
Give someone a replacement card	People > Card status > Replace
Deal with someone leaving	People > Employees: untick Active (manager card). Deactivate their card under Card status.
Add a forgotten IN or OUT	Timesheets > Punches and corrections > Add missed punch
Remove an accidental punch	Punches and corrections > Void
Explain an approved late or early punch	Punches and corrections > Manager note
Record a sick day	Punches and corrections > Recorded absences
Approve or deny vacation	Timesheets > Vacation
Record vacation approved by phone or email	Timesheets > Vacation > Record vacation
Send someone their timesheet again	Timesheets > Timesheet links > Create and email
Send someone a vacation link	People > Employees, open the person, Send vacation link
Close the pay period	Timesheets > Pay periods > Review, approve everyone, Close period, Create export / revision
Resend the payroll report	Pay periods > Send report (closed periods only)
Change the grace period	Settings > Late grace and repeat taps
Check an email was sent	Settings > Email queue
Add a stat holiday	Settings > Stat holidays
See who changed something	Device > Audit log

About the examples

The screenshots come from the actual timeclock software (1.9.5-RC3-cleanup27) running on sample data. The names, card numbers and addresses are made up.
